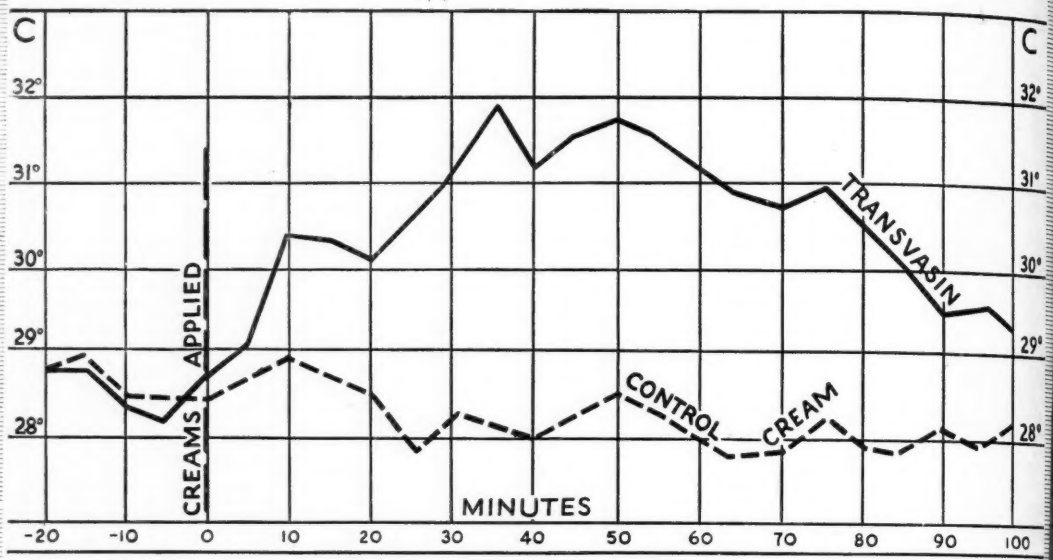
KO LABORATORIES LTD., GREENFORD, MIDDLESEX. BYRon 3434

urnal of the Royal College of Nursing

An experiment to show the effect of Transvasin on skin temperature



The graph above is of an experiment to measure the effect of Transvasin on skin temperature on a subject. The solid line plots the skin temperature before and at intervals after a single application of one inch of cream (0.924 grams) from a tube of Transvasin. The broken line gives similar information with regard to the application of a plain vanishing cream used as a control. Skin temperatures were measured with an electro-thermo couple every five minutes for two hours.

IT IS generally agreed that cases of soft-tissue rheumatism and of many types of arthritis benefit by hyperaemia of the affected tissues. Transvasin, which contains two quick-acting esters of nicotinic acid, induces such a deep and prolonged hyperaemia at the same time as it produces superficial erythema.

In addition to the esters of nicotinic acid, Transvasin contains the fat- and water-soluble esters of salicylic and p-aminobenzoic acids. Both these well-tried analgesic drugs are readily conveyed through the skin in therapeutic quantities and enable an effective concentration to be built up where they are needed.

Transvasin is now being widely prescribed, with successful clinical results. Since a very small quantity is sufficient for each application, the cost of treatment is extremely low.

COMPOSITION

Salicylic acid tetrahydrofurfuryl-ester	14%
Nicotinic acid ethyl-ester	2%
Nicotinic acid n-hexyl-ester	2%
p-Aminobenzoic acid ethyl-ester	2%
Water-miscible base ad	100%

Transvasin is available in 1 oz. tubes, price 4/3, and is not advertised to the public. Samples and literature will be gladly sent on application.

Transvasin

SOUTH-EAST METROPOLITAN REGIONAL HOSPITAL BOARD—Continued

STUDENT NURSE TRAINING

There are many Hospitals (including Mental Hospitals and Mental Deficiency Institutions) offering first class training facilities for young men and women to train as **STUDENT NURSES** and **PUPIL ASSISTANT NURSES**. These Hospitals are situated in South-East London, Kent and East Sussex (all within easy reach of London). Training normally last three years for Student Nurses and two years for Pupil Assistant Nurses and an allowance of between £260 and £285 a year is payable during training, less £119 for board, lodging and uniform. There is an additional allowance of £45 for Mental Nurse Training. If over 21 years of age, the allowance is between £390-£420 less £144 for board etc. if required. Applicants who wish to enter training should write to the South-East Metropolitan Regional Hospital Board, 11, Portland Place, W.1, stating at which Hospital or in which part of the Region they would like to train. All applications will be acknowledged and further details forwarded. If so desired an interview can be arranged with the Board's Nursing Officer.

SISTERS

BROMSGROVE GENERAL HOSPITAL (423 beds. General and Part II Midwifery Training School). **Relief Sister;** also **Geriatric Ward Sister.**

EVESHAM GENERAL HOSPITAL, EVESHAM (General—50 beds). Sister for casualty and theatre duties. Also Permanent Relief Sister for general duties.

ST. WULSTAN'S HOSPITAL, MALVERN (Tuberculosis—250 beds). Surgical Ward Sister. Also Medical Ward Sister.

SHRUB HILL HOSPITAL, WORCESTER (116 beds. Maternity—18). Ward Sisters.

THE CORBETT HOSPITAL, STOURBRIDGE (General—114 beds). General Training School. Orthopaedic and Medical Ward Sister. Resident or non-resident.

WORCESTER ROYAL INFIRMARY (General—213 beds). Experienced Plaster Room Sister; preferably with Orthopaedic Certificate.

STAFF NURSES

BROMSGROVE GENERAL HOSPITAL (423 beds. General and Part II Midwifery Training School).

EVESHAM GENERAL HOSPITAL (General—50 beds).

KNIGHTWICK SANATORIUM, Nr. WORCESTER (Tuberculosis—100 beds). For female block.

MALVERN GENERAL HOSPITAL (General—17 beds). Resident.

RONKSWOOD HOSPITAL, WORCESTER (General—251 beds. Maternity—50 beds). Part I Midwifery Training School. For Acute Medical and Surgical Wards, also for night duty.

ST. WULSTAN'S HOSPITAL (Tuberculosis—250 beds).

THE CORBETT HOSPITAL, STOURBRIDGE (General Training School—114 beds). For general ward duties. Resident or non-resident.

WORCESTER ROYAL INFIRMARY (General—213 beds). Staff Nurses for Private Wards, for Theatre, for modern Paediatric Unit. Preferably S.R.N., R.S.C.N. Medical Ward. Excellent experience in the nursing of sick babies. Also one with Orthopaedic Certificate. For Orthopaedic Wards.

POST-GRADUATE COURSES

ROMSLEY HILL HOSPITAL, HALESOWEN, Nr. BIRMINGHAM (Pulmonary Tuberculosis—120 beds). Male and female S.R.N. accepted as Staff Nurses for one year's training for B.T.A. Certificate. Two vacancies from 1st January, 1957. Resident or non-resident.

ST. WULSTAN'S HOSPITAL, MALVERN (Tuberculosis—250 beds). Staff Nurses for B.T.A. Certificate.

STATE ENROLLED ASSISTANT NURSES

AVONSIDE HOSPITAL, EVESHAM (Long-stay and Maternity—260 beds).

EVESHAM GENERAL HOSPITAL (General—50 beds).

KYRE PARK HOSPITAL, Nr. TENBURY WELLS (Primary Tuberculosis in Children—66 beds).

MALVERN GENERAL HOSPITAL (22 beds). Resident.

RONKSWOOD HOSPITAL, WORCESTER (General—251 beds. Maternity—50 beds). For day and night duty.

ST. WULSTAN'S HOSPITAL, MALVERN (Tuberculosis—250 beds).

SHRUB HILL HOSPITAL, WORCESTER (116 beds. Maternity—18).

WORCESTER EYE HOSPITAL (Ophthalmic—18 beds). Resident.

MIDWIFERY SISTERS

BROMSGROVE GENERAL HOSPITAL (423 beds. General and Part II Midwifery Training School).

STAFF MIDWIVES

AVONSIDE HOSPITAL, EVESHAM (Long-stay and Maternity—260 beds). Two required for day and night duty. Resident or non-resident.

RONKSWOOD HOSPITAL, WORCESTER (General—251 beds. Maternity—50 beds). For ward and departmental work in busy midwifery unit.

SHRUB HILL HOSPITAL, WORCESTER (116 beds. Maternity—18).

PUPIL MIDWIVES

BROMSGROVE GENERAL HOSPITAL (423 beds. General and Part II Midwifery Training School).

RONKSWOOD HOSPITAL, WORCESTER (General—251 beds. Maternity—50 beds). Vacancies February and May, 1957. New, well-equipped department including a premature baby unit.

STAFFORDSHIRE

DEPARTMENTAL SISTER

WORDSLEY HOSPITAL, Nr. STOURBRIDGE, WORCS. (Acute—472 beds). Midwifery Sister for 34-bedded unit. General practitioner beds. Resident.

WARWICKSHIRE

NIGHT SISTERS

WARWICK HOSPITAL (320 beds). Complete Training School for the General Register. **Required shortly.**

CONTINUED OVERLEAF

BIRMINGHAM REGIONAL HOSPITAL BOARD—(*Contd.*)

WOLVERHAMPTON AND DISTRICT

NIGHT SISTERS

NEW CROSS HOSPITAL, WOLVERHAMPTON (General and Maternity—627 beds). Training School. S.R.N., S.C.M. for General and Maternity Wards. Resident or non-resident.

SISTERS

LADY FORESTER HOSPITAL, BROSELEY, SALOP. (General and Maternity—30 beds). S.R.N., S.C.M. Capable of taking charge in Matron's absence. Good accommodation.

STAFF NURSES

BRIDGNORTH AND SHROPSHIRE INFIRMARY, BRIDGNORTH (General and Maternity—55 beds). S.R.N. for General Wards. Resident or non-resident.

NEW CROSS HOSPITAL, WOLVERHAMPTON (General and Maternity—627 beds). Training School. For General Wards. Resident or non-resident.

MIDWIFERY SISTER

LADY FORESTER HOSPITAL, BROSELEY, SALOP. (General and Maternity—30 beds). S.R.N., S.C.M. or S.C.M. only. Unit of 8 beds. Resident post, good accommodation.

STAFF MIDWIVES

LADY FORESTER HOSPITAL, BROSELEY, SALOP. (General and Maternity—30 beds). For night duty. Resident or non-resident.

NEW CROSS HOSPITAL, WOLVERHAMPTON (General and Maternity—627 beds). Training School. For Maternity Unit of 54 beds. Resident or non-resident.

MENTAL NURSING APPOINTMENTS

ASSISTANT MATRON

WESTON HOSPITAL, WESTON-UNDER-WETHERLEY, Nr. LEAMINGTON SPA (Mental Deficiency). Good residential accommodation available.

NIGHT SISTER

LEA CASTLE COLONY, Nr. KIDDERMINSTER (Mental Deficiency—160 beds). **In sole charge.**

WARD SISTERS

CITY GENERAL HOSPITAL, STOKE-ON-TRENT (Female Psychiatric Unit—86 beds). S.R.N., S.R.M.N.

COLESHILL HALL HOSPITAL, COLESHILL, Nr. BIRMINGHAM (Mental Deficiency).

STAFF NURSES

ALTON STREET HOSPITAL, ROSS-ON-WYE (Chronic Sick and M.D.—167 beds). Female for Mental Defective Wards.

CITY GENERAL HOSPITAL, STOKE-ON-TRENT (Female Psychiatric Unit—86 beds) S.R.N., S.R.M.N. Also Male Staff Nurse, S.R.N., S.R.M.N., for Male Psychiatric Unit.

PUPIL ASSISTANT NURSES

Are required at the following hospitals, for two years' training for Roll of Assistant Nurses. Further particulars from the Matron of the hospital concerned.

AVONSIDE HOSPITAL, EVESHAM (Long-stay and Maternity—260 beds). Assistant Nurse Training School. Male and female. Training given by teaching staff at Avonside Hospital and Evesham General Hospital for acute and surgical treatment.

CITY GENERAL HOSPITAL, STOKE-ON-TRENT (845 beds). Male and female.

MID-WORCESTERSHIRE HOSPITAL MANAGEMENT COMMITTEE. Male and female. Study day system of training. Apply to the Matron of one of the component Training Schools: Bromsgrove Cottage Hospital; Blackwell Recovery Hospital, Nr. Bromsgrove; Smallwood Hospital, Redditch; Blakebrook Hospital, Kidderminster.

SUMMERFIELD HOSPITAL, BIRMINGHAM, 18 (Chronic Sick and Geriatric—1,066 beds). Male and female over 18 years. Resident accommodation. Next schools commence 21st January and 18th March.

PUPIL ASSISTANT NURSES—Contd.

THE ANDRESSEY HOSPITAL, BURTON-UPON-TRENT, STAFFS. (214 beds). Male, non-resident; female, resident or non-resident. For new Training School to commence in the new year. The hospital is at present undergoing developments, including complete new sanitary annexes, the addition of a 35-bed geriatric unit which will be opened in the spring of next year, and the maternity department will be increased in size in the very near future. Applications will be considered from persons up to 50 years of age.

WEST HEATH HOSPITAL, BIRMINGHAM, 31 (Pulmonary Tuberculosis—210 beds). **Male and female.** Part of the course to be taken at Yardley Green Hospital and Selly Oak Hospital West.

WORCESTER ROYAL INFIRMARY (General—213 beds). School of Nursing incorporating Ronkswood and Shrub Hill Hospitals, Worcester. This training offers experience in acute medical and surgical nursing and chronic sick nursing. Next school commences 14th January, 1957.

YARDLEY GREEN HOSPITAL, BIRMINGHAM, 9 (All forms of Tuberculosis including Surgical Unit—413 beds). Part of the course to be taken at Selly Oak Hospital West.

STUDENT NURSE TRAINING

The undermentioned hospitals offer facilities for Student Nurse Training and applications are invited from women (and where indicated from men), aged 18 to 30, to take the course of three years' General Training for State Registration. The Block System of Training, where referred to, means that much of the theoretical work is undertaken when the Nurse is not working on the wards. For further particulars, details of salaries and application forms, apply to the Matron of the hospital concerned unless otherwise stated.

CITY GENERAL HOSPITAL, STOKE-ON-TRENT (845 beds). Complete General Training School. **Male and female.** Study day block system in operation. Pleasantly situated; modern nurses' home; separate bedrooms.

BROMSGROVE GENERAL HOSPITAL, WORCS. (General and Fever—423 beds). Midwifery Training School—423 beds). Male and female.

CHESHIRE JOINT SANATORIUM, Nr. MARKET DRAYTON, SALOP (305 beds). Two years' training for British Tuberculosis Association Certificate. Post-registration students also accepted

DUDLEY ROAD HOSPITAL, BIRMINGHAM, 18 (General—659 beds. Maternity—141 beds. Premature Baby Unit). Complete General Training School. Training in three years plus three months trial period. Block system training in operation. Vacancies 4th February and 11th March.

HALLAM HOSPITAL, WEST BROMWICH (454 beds). For Preliminary Training School Course commencing April, 1957, and approximately every three months.

KIDDERMINSTER GENERAL HOSPITAL (112 beds). **Female.** Complete General Training School.

LITTLE BROMWICH GENERAL HOSPITAL, BIRMINGHAM, 9 (General and Fever Training School—700 beds).

NORTH STAFFORDSHIRE ROYAL INFIRMARY, HARTSHILL, STOKE-ON-TRENT (455 beds). Complete General Training School. **Female.** Block system of training in operation. Modern nurses' home in pleasant surroundings. Separate bedrooms. Recreational facilities.

ST. CHAD'S HOSPITAL, BIRMINGHAM, 16 (General—152 beds). Female. Immediate vacancies.

ST. WULSTAN'S HOSPITAL, MALVERN (Tuberculosis—250 beds). Complete two years training for British Tuberculosis Association Certificate. Beautifully situated modern hospital. Travelling allowance to Worcester once per week. Staff social activities include tennis, badminton, cinema, etc.

WALSALL MANOR HOSPITAL (General—301 beds. Maternity—32 beds). Male and female.

WARWICK HOSPITAL (320 beds). Complete Training School for General Register. Next course commences February, 1957. Candidates on the Supplementary Register of the General Nursing Council are accepted for a two years' period of training.

WEST HEATH HOSPITAL, BIRMINGHAM, 31 (Pulmonary Tuberculosis—210 beds). **Male and female** for two years training for B.T.A. Certificate.

WORCESTER ROYAL INFIRMARY (General—213 beds). School of Nursing (including Ronkswood Hospital). Good education required. Nurses' home pleasantly situated with modern single rooms. Block system of training established. Candidates on the Supplementary Register of the General Nursing Council are accepted for a two-year period of training. Next school 11th February, 1957.

YARDLEY GREEN HOSPITAL, BIRMINGHAM, 9 (All forms of Tuberculosis including Surgical Unit—413 beds). **Male and female.** Resident or non-resident. Four year course of training in general and tuberculosis nursing. First two years at Yardley Green Hospital, followed by two years at Dudley Road Hospital or Selly Oak Hospital, Birmingham. Students are also accepted for two years training for the British Tuberculosis Association Certificate.

THE UNITED LIVERPOOL HOSPITALS
DAVID LEWIS NORTHERN HOSPITAL
LEEDS STREET, LIVERPOOL, 3

Administrative Sister required, S.R.N. Applications stating age, particulars of training and subsequent experience and Matron's name for reference, to be sent to Matron. (3378)

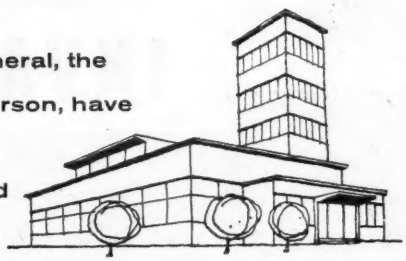
Canada needs 50 nurses

FOR HOSPITALS IN HAMILTON, ONTARIO

The three city-owned hospitals, the General, the Mountain and the Nora-Frances Henderson, have recently undergone an expansion programme and are in immediate need of a minimum of 50 S.R.N. Nurses



Recognized as one of the most modern-equipped hospitals in Canada, the Hamilton General offers the Registered Nurse working and recreational facilities second to none.

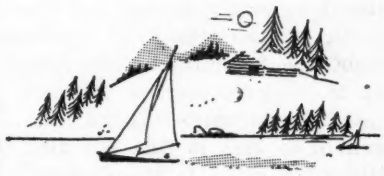
Situated in the heart of what has been termed the 'Golden Horseshoe', Hamilton is a city of almost equal distance to Toronto and Buffalo, big enough to be interesting, yet small enough to be friendly and hospitable to the individual.

THE RATES OF PAY to Registered Nurses are the highest in the Province of Ontario. For Registered Nurses who work rotating hours of service, the commencing salary is $53.00 (£19.17.0) per week. The daily rate is $10.50 (£3.18.8) for each eight hour period of duty.

HOURS OF DUTY: (a) 8-hour day—42 hours weekly average—rotating service. *Days:* 7 a.m. to 3.30 p.m. or 10 a.m. to 7 p.m.; *Evenings:* 3 p.m. to 11.30 p.m.; *Nights:* 11.15 p.m. to 7.15 a.m. These schedules include one half hour for each meal and 15 minutes for morning coffee. (b) Two days off three successive weeks and one day off every fourth week. (c) All statutory holidays or compensatory time.

HOLIDAYS: Registered Nurses after one year of service receive 3 weeks' holiday with pay. It is less than 200 miles to the beautiful Muskoka Lakes District.

The Hospital will advance cost of transportation if required on a repayment basis.



Here is a unique opportunity for Registered Nurses to come to a thriving community where your opportunities are unlimited

For further particulars and application forms write to Dept. 146

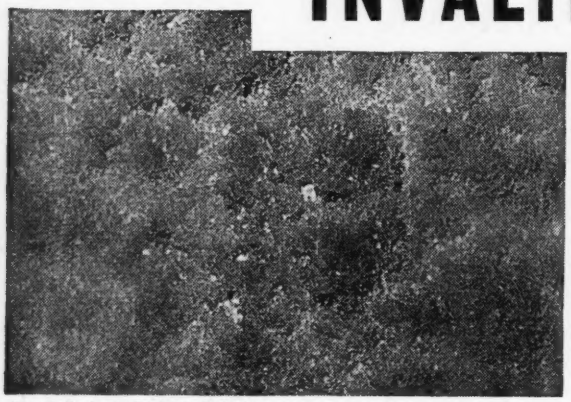
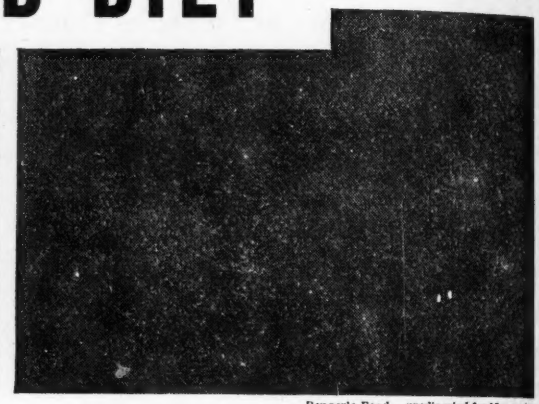
Boiled milk.

INVALID DIET



Benger's Food—predigested for 5 minutes.



Benger's Food—predigested for 15 minutes.

MILK IS A readily available source of protein. Frequently, however the patient is intolerant of the normal formation of curds in the stomach. Intake is reduced, digestion impaired and absorption of protein diminished.

A CLEAR CASE FOR BENGER'S FOOD. Benger's is a wheaten flour preparation containing the natural digestive enzymes *amylase* and *trypsin*. These "pre-digest" two vital foods—milk and wheaten-flour. When hot milk is added to Benger's they start to work—converting Benger's wheaten base into nourishing food and modifying the milk so that it does not form tough indigestible curds in the stomach.

Extra protein is thus absorbed by the patient without strain on the digestion. Moreover, the degree of "pre-digestion" can be regulated to suit the patient's condition—"nursing" him or her back to the point where normal diet can be ingested.

THE MICROPHOTOGRAPHS ABOVE, illustrating the effects of gastric juice on both milk and Benger's Food, show how Benger's prevents the formation of curds.

FULLY-DESCRIPTIVE LITERATURE, including a specially-prepared Invalid Diet Recipe Book, is available; and a Technical Information Service is always at your disposal.

JOURNAL OF THE ROYAL COLLEGE OF NURSING

NURSING TIMES

Macmillan and Company Limited, London Friday, December 28, 1956

EDITOR: MISS M. L. WENGER, S.R.N., S.C.M., DIPLOMA IN NURSING, UNIVERSITY OF LONDON

The Nation's Health

DAME Elizabeth Cockayne, chief nursing officer of the Ministry of Health, and her associates, contribute the section 'Nursing and the Public Health', published in the annual report (for 1955*) of the chief medical officer, presented to the Minister of Health and to Parliament this month. The section deals first with mental and mental deficiency nursing; this is followed by nursing education, midwifery, health visiting, home nursing, health education and finally the health of nurses.

On each subject developments during 1955 are noted and the attention now rightly paid to the important matter of nurses' health is welcomed. A few instances of high sickness rates among local authority nursing staff had been noted also and incidence of prolapsed intervertebral discs; in one authority five nurses were having treatment in plaster for this condition at one time. Elsewhere in the report it is noted that the physical strain of nursing heavy patients is considerable and attention is drawn to the method known as the 'Australian lift'.

Fewer cases of sensitivity to antibiotics had been reported and since 1943, 40 disabled nurses had been given assistance to take further training for suitable employment. An improvement in health was noted by one authority after introducing a system of freedom for midwives from night calls for five nights a week, and by another after improved transport had been provided.

One district nursing institution had made an analysis of time lost through staff sickness; of 47 individual absences six were due to injuries such as accidents, antibiotic rashes and dog bites! The average sick leave per year was 17 days; in another area it was 8.8. In yet another area the health visitors had an average of 16.3 days sick leave, home nurses 24 days and midwives 18 days. The additional week's holiday agreed by the Whitley Council might, it was thought, have a beneficial influence on the nurses' health. The report notes that more health visitors are being allocated to hospitals or wards of hospitals to develop liaison with the home and that health visitors continue to take part in research and experimental projects.

On nursing education the report refers to the 983 hospitals approved to take part in the training of student nurses for the Register, and to the fact that group schemes of training are increasing, but there is "room for further development in this connection so that hospitals may offer better facilities for training and attract better candidates and so reduce wastage and turnover of staff." There was still a shortage of qualified tutors, a disappointing lack of suitable candidates coming forward and a constant drain from this field of work to others. An education committee charged with the responsibility for the educational policy of the school and representative of all concerned with nursing education "is an undoubted advantage", states the report.

The importance of training more assistant nurses was becoming more widely appreciated and 400 hospitals were approved for this purpose.

In the general section of this 200-page report, Sir John Charles, the chief medical officer, reviews the varied aspects of the 'State of the Public Health', from epidemiology to international health and concluding with the artificial limb service. On infections of uncertain origin, interesting references are made to neurotropic infections and the outbreak at a London teaching hospital of 292 cases of encephalomyelitis which included 149 nurses and 27 doctors.

In 1841 the expectation of life of the newly born child was, for boys, seven years less than for the child surviving to one year of age, and six years less for girls. Today there was no difference in the case of boys and no more than one year in the case of girls. But, while the perinatal mortality rate (i.e. stillbirths and deaths under one week) had been about halved since 1928 it had shown little improvement since 1949. The improvements had been in the saving of infant life after the first week. Early recognition of tox-

Nurses at the Westminster Hospital rehearsing the carols they were to sing to patients in the wards at Christmas.

* *'On the State of the Public Health'. Report of the Ministry of Health, Part 2. (H.M. Stationery Office, 9s.)*

aemias of pregnancy is therefore emphasized, and in the nursing section the midwife's part in antenatal care is referred to, also her part in relaxation classes for expectant mothers.

There are encouraging and disturbing facts in the report. For the second year in succession no case of smallpox was recorded, but primary vaccination of infants was still disappointing; acceptance rates in different local authority areas varied from 5.1—70.1 per cent. Typhoid and paratyphoid fevers were held responsible for 15 deaths during the year, with 1,069 notified cases (193 being typhoid fever). Notifications of dysentery continued to increase though the type of infection was not severe. Food poisoning remained of serious importance.

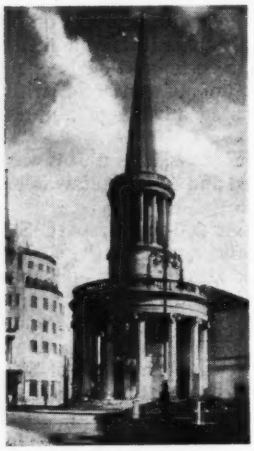
The changing picture in tuberculosis enabled the practice of sending patients to Switzerland for sanatorium treatment, started in 1951, to be discontinued. Poliomyelitis resulted in 270 deaths and 3,712 cases of paralytic form were notified. The manufacture of poliomyelitis vaccine had been established.

"Breast feeding of infants is good for both infant and mother," comments the report and this being so it is "disappointing to see its steady decline in the teaching hospitals throughout the country, where doctors and midwives receive their training and have their professional attitude conditioned."

Home accidents "continue to provide a depressing picture. It would seem that the educational work which is being undertaken is having no effect whatsoever on the situation."

This report should be available in every nursing library and should be frequently referred to both for current trends in medical progress and as an historical survey of the work of the National Health Service.

Topical Notes



All Souls Church, Langham Place.

Carols by Candlelight

NURSES AND THEIR FRIENDS were privileged once more to enjoy some lovely Christmas music in All Souls Church, Langham Place, on Tuesday evening, December 18, when the church was filled to capacity for the service of Carols by Candlelight arranged by the North Western Metropolitan Branch of the Royal College of Nursing, and held there by kind permission of the rector, the Rev. J. R. W. Stott. The Nine Lessons were read this year by nurses representing various spheres of work in the profession: Miss H. M. Downton, Miss K. A. B. Fowler, Miss F. M. Kynaston, Miss B. M. Slaney, Miss A. E. Marples, Mrs. P. M. Todd Webb, Miss P. R. M. Rowe, Miss N. C. Daniells, and Miss L. Y. Dublin, a student nurse from British Guiana. The choir of All Souls Church sang with exquisite effect many lovely Christmas airs, among the less familiar being a delightful old French carol 'Whence is this Goodly Fragrance?' and the vigorous and dramatic arrangement by P. Cornelius of 'Three Kings from Persian Lands Afar'. Officers of the nursing services of the Crown, the district nursing service, the General Nursing Council for England and Wales and members of hospital nursing staffs, assisted with the presentation of the offertory, from which donations will be given to professional benevolent funds. Members of hospital nursing staffs in the North Western Metropolitan area distributed the order of service, their uniforms adding a further touch of colour and lightness to the richly decorated interior of the church. Among the large and representative congregation were the deputy mayor and mayoress of St. Marylebone, Councillor and Mrs. John Guest, Lady Braithwaite, Miss G. M. Godden, O.B.E., president of the Royal College of Nursing, Mrs. A. A. Woodman, M.B.E., and two distinguished visitors from South Africa, Miss Iris Marwick and Mrs. Charlotte Searle.

Princess Alexandra at the Red Cross

TWO NEW AMBULANCES, gifts from the British Hungarian Cultural Fellowship and Edinburgh University, were inspected by Princess Alexandra of Kent when she visited the British Red Cross Society's headquarters on December 18. The ambulances, piled high with toys and other gifts, were starting out for Vienna the next day, driven by three medical students and one science student of Edinburgh University. In Vienna they were to be handed over to the International Red Cross and driven into Hungary in time for Christmas. The Princess was welcomed by Lady Limerick, vice-chairman, Mrs. A. M. Bryans, deputy chairman, and Miss B. Coke, director of the Junior Department, of the British Red Cross Society. She toured the building, visiting the packing and posting rooms, the civilian and foreign welfare departments, the invalid travel section, the junior department and the board room, where volunteers were sending out letters of thanks for donations.

Staff from all departments were presented to the Princess, who also met and talked to several young representatives of the Junior Red Cross who had been collecting toys and new clothes for Hungarian children, some of which were being sent in the two new ambulances.

Nursing Sisters on Hungarian Airlift

NURSING SISTERS of the B.O.A.C. Medical Department were on the 25 special flights which the Corporation arranged to bring Hungarian refugees from Vienna to London from December 2-11. Twenty-four of these flights were made by B.O.A.C. turbo-prop Britannias, three flights a day having been undertaken on several occasions, and one flight was by a Stratocruiser. The B.O.A.C. Medical Committee detailed a nursing sister to accompany each flight and their services were much appreciated by the refugees. The staff taking part were Senior Nursing Sister O. M. Keirle, Sisters E. Smith, R. Fowke, K. Sleigh, J. Barnwell, M. Grabham, M. Enright, E. Stenburge and B. Williams. Nearly 2,800 refugees were carried, of whom two-thirds were men. Many of them were suffering from the effects of their recent ordeal; one woman had been standing in the River Danube for 18 hours and had not had her shoes off for four days. At London Airport the refugees were met by the British Red Cross Reception Committee and taken to centres in various parts of the country.

BERKSHIRE MENTAL HOSPITALS EXHIBITION

THE Berkshire Mental Hospitals staged an excellent exhibition in Reading Town Hall from December 10-14 which aroused a great deal of interest locally and should prove a much needed fillip to the recruitment of nurses. The event was made an outstanding occasion by the opening of the exhibition by Patricia, Viscountess Hambleden, and by a visit from the Duchess of Kent, who toured the exhibition on December 11 and presented the prizes won by the student nurses in the training hospitals of the group—Fair Mile Hospital and Borocourt Hospital for mental defectives.

The Duchess of Kent was welcomed by the Mayor of Reading, Councillor A. Lockwood, J.P., who said how memorable the day had been made by her visit, both for the nurses, the hospitals which had organized the exhibition, and the citizens of Reading who were present. The Duchess said how glad she was to present prizes to the nurses at this exhibition which had a threefold purpose: to familiarize the ordinary person with the work being done by the mental hospitals, to gain the interest and help of the general public in that work, and to show something of the methods of diagnosis and treatment available in these modern institutions.

In the past the patient suffering from disturbance in his mental health had been reluctant to go to hospital for treatment; this was largely due to fear of the unknown. It was therefore very important that the layman should realize that today the different forms of mental illness could be diagnosed and treated. A change in the attitude of the public had already resulted but there were still great problems; too few beds, overcrowding and too few nurses. She hoped that the exhibition would arouse interest in the mental health services locally, and would attract young men and women from the neighbourhood to this valuable public service.

General H. R. Lambert, C.B.E., D.S.C., chairman of the management committee of the Berkshire Mental Hospitals then announced the names of the winners of prizes and shields from the various hospitals, and the Duchess as she presented them had a few words to say to each nurse.

Every facet of the work of the different hospitals in the group was seen in the exhibition. An interesting exhibit from the group training school at Moulsford Manor showed the equipment in the form of models and charts, nursing apparatus, textbooks, and well-illustrated notebooks of some of the student nurses. Photographs showed the exterior and interior of each hospital with its points of special interest. Fair Mile Hospital, the largest in the group, showed by means of graphs how the numbers of admissions and discharges had risen steadily from 311 admissions in 1946 (of which 193 were voluntary) to 578 in 1956 up to November 30 (of these 476 were voluntary); of discharges from 219 in 1946 (of which 154 were voluntary patients) to 451 in 1956 up to November 30 (of whom 419 were voluntary patients). The most striking feature was the rapid increase in admissions and discharges which had followed the opening of the new admission unit, proving the value of this new approach to mental cases.

Of the comparatively small number of certified patients admitted, 50 per cent. were shown to be senile cases, who would probably never have needed to be admitted if there were more satisfactory care for old people in the form of hostels and flats, with clubs and work centres where they could find companionship and security and independence, yet be free from the natural fears of old age.

Following this section came demonstrations of methods of diagnosis and treatment. First the Duchess watched an electroencephalogram being recorded and was shown how the tracings varied when the eyes were open and closed, and how these tracings compared with those from patients suffering from epilepsy.

The apparatus necessary for the modern insulin and controlled electro-convulsion therapy was set out. These methods were described by the nursing staff, who pointed out that many cases of depression were satisfactorily cured by

The National Health Service and the Home Nurse

by A. T. ELDER, M.D., PH.D., D.P.H.

EACH individual branch of the domiciliary nursing service, apart from the many lesser problems peculiar to its own efficiency and internal economy, may be said to face today a difficulty of major importance.

In the case of the health visitor it is, broadly speaking, the place of the health visitor in the general field of social work, while with the domiciliary midwife it is the trend in the direction of hospital confinements, in spite of widespread exhortations on the safety and economy of childbirth at home. What, then, is the position of the home nurse, and what is her major problem? How essential is she to the service as a whole, and what is her relative value in the realm of specialized nursing? What is the future trend, and is her branch of the service as fully developed as it might justifiably become?

To find the answers to these questions, let us make a brief general review of the present position of home nursing.

In 1835 a Dr. Walker wrote: "The separation of the sick from their families should cease wherever they can equally well be relieved as Home Patients; for it must never be forgotten that the end of Medical Charities is not to remove the sick from their friends but to remove *only those whose recovery cannot be so well attempted at home.*"

That this was appreciated by many, but not by sufficient people was reflected in the very valuable, though limited, development of voluntary nursing associations; limited, that is, throughout the United Kingdom as a whole. Here and there were societies doing magnificent work within the limits of their financial resources.

Increasing Domiciliary Work

It is a favourite exercise to ponder on the increase in the numbers of nurses employed in domiciliary work since the introduction of the Health Service, but actual numbers of nurses do not reflect necessarily an increase in efficiency or the degree of increased service to the nation, because there are large numbers of nurses employed part-time or in combined duties. A more accurate reflection is obtained from studies of the increased numbers of home visits paid, and the variety of ailments which receive attention.

Taking the years 1951 and 1955 for comparison, there was an approximate increase of 3,000,000 visits paid by home nurses in England and Wales, an increase, that is, of about 16 per cent. in the volume of work. In Belfast, taking population statistics into the reckoning, the volume of work in 1955 was running parallel to that in Great Britain *pro rata*. Much the same types of case were receiving attention but the Belfast Home for District Nurses appears to have offered very greatly increased help over the years to the local practitioners in giving injections (such as antibiotics and insulin), and in the home nursing of general surgical post-operative cases.

This is bound to relieve the load on hospitals, though to what extent is, as yet, not known with accuracy. That it is desirable follows from a study of the ever-increasing costs of hospital and specialist services which absorbed 56.25 per cent. of the total costs of the Health Service in 1955, against 55.5 and 52.75 per cent. in the two preceding years.

The annual report of the United Cambridge Hospitals Home Care and Nursing Service for 1954, reviewing the years since the service started in August 1949, states "it is evident that the Scheme has been successful within its own limits".

"During the past five years the service has been almost entirely used for short-term surgical patients and found most suitable for them. It has been proved that for these patients:

(1) adequate care can be provided at home;

(2) there is no undue strain on their relatives, who prefer to manage, if possible, without a home help. This may be due to the mainly short-term nature of the illness;

(3) most of the patients appear to prefer early discharge;

(4) the service has brought about a saving of hospital bed days and, therefore, relieved the surgical waiting lists;

(5) the cost of the service is comparatively small;

(6) it has helped to encourage co-operation between hospital, general practitioner and the local health authorities."

Home care of this nature may operate in two ways, either from hospital to home, the after-care being provided from hospital resources, as at the Montifiore Hospital, New York, or from health committee resources as is appropriate by the nature of our Health Service in the United Kingdom. In either case, however, the liaison with the home help service is an essential feature.

In dealing with selected categories of patient, there appears to be a clearly recognized scope for the home nurse in the handling of cases at the extremes of life. The symposium published by *The Practitioner* in July 1956 mentions two successful home nursing schemes devoting themselves to the care of children—a home nursing unit set up in Rotherham in 1949, and a similar scheme which began in Birmingham in October 1954. "The value of these schemes has already been shown by the extent to which they have prevented the admission of children to hospital and by the appreciation of the doctors who have helped." The home care of babies suffering from gastro-enteritis is described in fair detail by Dr. J. Adrian Gillet.

Home Nursing of the Elderly

In the same volume Lord Amulree describes the special points applying to the care of the elderly at home, and he postulates that "it is often worth asking the question whether it is advisable or even wise to admit an elderly person to hospital unless the medical reasons are overwhelming".

Foster schemes for the care of old people are now being developed, but the link with the home nursing and home help services requires to be strengthened. No one

---

Abstract of the inaugural address at a refresher course for domiciliary nurses held at the Belfast headquarters of the Northern Ireland Committee, Royal College of Nursing.

branch of the local authority services can stand supreme or aloof in this most valuable provision.

In the main, the home nursing service appears to deal with general medical and surgical conditions, infectious cases and tuberculosis, and complications of maternity work, and to afford assistance to the family doctor in the matter of inoculations and injections of various kinds.

In 1953 the writer, dealing with the various aspects of prevention of illness and after-care (Ministry of Health Bulletin, October 1953), suggested that the home nursing service was, in general, under-developed, and that it might reasonably expand to provide for one State-registered nurse to every 5,000 of population and its scope be widened to include: (*a*) the provision of male nurses for certain cases; (*b*) nurses for short daily visits; (*c*) nurses for full-time daily attendance; (*d*) nurses for evening or residential care; (*e*) nurses for specialized forms of nursing; (*f*) interchange systems with hospital services.

The sixth annual delegate conference of the Society of Registered Male Nurses Limited, meeting in September 1956, discussed a variety of subjects. It is not clear, however (and certainly it does not as yet occur in Northern Ireland) how far male nurses fill any particular role in the home nursing service, or to what extent the need for such a service exists, though I am aware that a few years ago Dundee initiated a service for male patients with a male nurse for home nursing duties.

Night nursing services, however, are here and there in operation, the Aberdeen Service being undertaken by the local district nursing associations in 1952, with a staff of five nurses with general training and three State-enrolled assistant nurses. This service was, in the main, intended for " those who are really ill and require more or less continuous nursing care ".

As to interchange systems with hospitals, there are many difficulties, but it may well be that scope exists in the neighbourhood of cottage hospitals staffed by general practitioners. Here the family doctor is in complete charge, whether patients are in or out of hospital, and pilot schemes of this nature might test the validity and economic value of interchange systems, quite apart from their value to the home nurse in keeping her knowledge of modern hospital nursing strictly up to date (without the need for refresher courses).

More Teamwork the Solution

As to future trends, let us turn for a moment to the Guillebaud Committee report. The solution to the services generally, it was felt, lay in finding the best way of encouraging more teamwork rather than in making changes in organization—this being particularly true in domiciliary services and preventive health. It was noted that there was room for improvement in the arrangements for exchanges between hospitals and old people's homes.

The development of the home nursing services constitutes just such an encouragement of teamwork—between family doctor, nurses, home helps and hospitals.

The working party set up at the end of 1953 to consider the training of district nurses reported in June 1955. The majority report confirmed the desirability of some measure of district nurse training for registered nurses taking up district nursing. It was considered that local health authorities would be able either themselves to carry out approved schemes of training or to arrange for training through the Queen's Institute of District Nursing or the Ranyard Nurses.

In Belfast and Londonderry, district nurse training is carried out satisfactorily by the district homes, supervised, as regards training, by the Queen's Institute of District Nursing.

A subscription to the NURSING TIMES is a present that will be remembered throughout the year. Subscription rates, post paid to any part of the world are: 12 months £1 14s. 8d.; 6 months 17s. 4d.; 3 months 8s. 8d. There are special rates for College members, Order a subscription to the NURSING TIMES for your friends from the Manager, Nursing Times, Macmillan and Co. Ltd., St. Martin's Street, London, W.C.2.

There appears to be no difficulty in the matter of obtaining a district nurse, and the local health authorities place no barrier in the way of provision of instruments and appliances for the use of home nurses. Such instruments as sphygmomanometers and syringes are in general use, together with bed-rests and other ward equipment necessary for the successful bed nursing of the patient at home, though loan charges may be made to the patient in certain instances.

Standard bag equipment is carried by each nurse, bags being inspected by home supervisors or county nursing officers at periodic intervals. Schemes of insurance covering the liability of nurses against claims for damages for negligence are operated either by health authority block schemes or the Royal College of Nursing block scheme.

Responsibility

Responsibility for treatment must, of course, lie with the family doctor, and this applies to the responsibility for requiring a nurse to undertake specific techniques. Techniques in general use include the giving of intramuscular and subcutaneous (but *not* intravenous) injections, minor procedures (such as removal of sutures), ear syringing, and giving of analgesics or even anaesthetics when a doctor is present. A point of controversy is the extent to which training should be given to nurses in withdrawal of blood for laboratory tests. In some areas this is done by the midwives but although there are indications for the useful employment of such techniques by home nurses, no such training as yet exists for them at any rate in Northern Ireland.

The most important, possibly, of all techniques is the intensification of aseptic precautions. The antibiotic-resistant staphylococcus and the persistent nasal carrier present just as much difficulty in the home care service as in hospital, but, in as much as more wounds and abrasions are dealt with in the early stages at home than ever before, too much importance cannot be placed on the responsibility of the family doctor and home nurse in preventing complications, and so rendering unnecessary many admissions to hospital.

I have asked what are the outstanding problems facing the home nursing service—I think it might be stated that understaffing, and under-development in special directions, still exist. Much more clinical work is being undertaken but it may well be asked how far the nurse is assisting the doctor, or doing his work for him! It is far from unusual for a patient's family to summon the nurse direct and demand a few penicillin injections, the contact with the family doctor being regarded as unnecessary. This is a trend which must be watched very carefully, and for the best use of nurses, not to mention the preservation of safety and medical ethics, allocation of nurses should be on medical recommendation and under medical guidance.

The indications, therefore, are that the place of the district nurse is already defined and undisputed, that the service will tend to expand rather than contract, and that the usefulness of the home nurse has neither been exhausted, nor her potentialities even fully explored.

Book Reviews

Handbook of Chest Surgery for Nurses

(*fourth edition*).—by J. Leigh Collis, M.D., B.SC., F.R.C.S., and L. E. Mabbitt, S.R.N. (*Baillière, Tindall and Cox, 7 and 8, Henrietta Street, London, W.C.2, 15s.*)

Once more this book has been revised and brought up to date. All nurses, both trained and in training, will note with pleasure that all the excellent diagrams have been retained, particularly those in the Anatomy, Breathing Exercises, Lung and Pleura sections. A further addition to this issue is an enlarged and more detailed section under the heading 'Mediastinum'. Included in this part are some very clear paragraphs relating to cardiac surgery with one or two more excellent diagrams.

The chapter on anaesthesia now includes more details of the relaxants and their antidotes, with the omission of ether and chloroform, these now being out of favour in major chest surgery. In this section the nurse may find it rather confusing to read: "The rubber tubing used to connect cylinders to flowmeters is now usually made of black anti-static rubber, but is identified for each particular gas by having a coloured ring on it the same as the colour of the cylinder containing the gas". A little further on it is stated, "The rubber tubing used to connect the flowmeter of the apparatus with the cylinders is also of distinctive colours", and gives the list of colours which do not now correspond with the colours of the cylinders as these have been changed since the third edition of this book and are given on the same page, although the tubing colours remain unchanged.

One other slight criticism is the diagram showing equipment for bronchoscopy. The specimen tube is connected to the suction end (patient) via the higher arm and the suction apparatus to the lower arm. If these tubes were attached in reverse there is less likelihood of the secretion being sucked right out of the specimen collector. This is a hazard which crops up most unexpectedly but most nurses learn by bitter experience that it pays to have the suction higher than the secretion inlet.

In spite of these two small discrepancies this is an excellent book, and all nurses will find it a boon when embarking upon the care of thoracic surgical patients and at other times of uncertainty as to correct procedure in such nursing.

Aids to Obstetrics

(*13th edition*).—by Leslie Williams, M.D., M.S., F.R.C.S., F.R.C.O.G. (*Baillière, Tindall and Cox, 7 and 8, Henrietta Street, London, W.C.2, 10s. 6d.*)

This little book is not meant to serve as a textbook but as an aid to the student to recall knowledge acquired in the maternity department, and the instructions received in the lecture room and on ward rounds. The content follows the usual pattern under the heading Pregnancy and Labour, with a section on obstetric operations and an appendix giving a list and dosage of some drugs used in obstetrics. The diagrams are simple and clear.

Advice given to the expectant mother is sensible and in line with modern teaching, except that the teaching of parentcraft and relaxation are not mentioned. Disorders associated with and due to the pregnancy are dealt with in a brief but comprehensive manner—except in the case of toxaemia; in this condition the text implies that raised blood pressure and albuminuria are the first signs, probably occurring after the 28th week, in mild cases rarely until the 32nd week; the importance of an excessive gain in weight between the 20th and 30th week, and the need to recognize early deviations from the normal, is not mentioned. In describing the types of placenta praevia the old terminology is used; the importance of refraining from internal examinations in cases of antepartum haemorrhage before transfer to hospital is emphasized. The value of X-ray in the diagnosis of the placental site is fully described in the chapter dealing with X-rays in obstetrics.

The chapter headed The Management of Childbed advises daily visiting during the first week (obviously for domiciliary cases). Massage for limbs and abdomen after a few days is advised but no scheme of exercises is suggested. In asphyxia neonatorum the old terminology is used to describe types of asphyxia and in the treatment of the condition the use of intra-gastric oxygen is not mentioned. In the care of premature infants nursed in oxygen tents it is said that oxygen in the tent must not exceed 50 per cent. but the danger resulting from excessive oxygen is not mentioned.

In the artificial feeding of infants, fresh cow's milk is advised, processed or dried milk is not mentioned.

There is a useful and comprehensive section describing delayed or obstructed labour—but the possible value of otherwise of proper preparation by mothercraft teaching and of relaxation is not referred to.

In the description of puerperal fever a full description of the clinical signs is given for each type of infection, and the present-day treatment with antibiotics is described. This book is presumably intended for medical students only; it is not suitable for use by pupil midwives as nursing techniques are completely omitted.

M. W. S., S.R.N., S.C.M.

A Guide for Psychiatric Aides

—by Charlotte R. Rodeman, R.N., B.S., M.ED. (*The Macmillan Company, New York; London Branch, 10, South Audley Street, London, W.1, 26s.*)

This book was originally written for auxiliary personnel in American Army psychiatric hospitals and its success prompted the writer to adapt the text as a guide for the psychiatric aide, in many ways the equivalent of the nursing assistant in this country.

It is an admirable book which, but for a few passages not specifically appropriate to British practice, could be used as a basic text for any scheme of instruction for nursing assistants in this country and which could well be the student nurse's first introduction to her work. The book follows very closely the draft syllabus which has recently been issued by the Ministry of Health for the instruction of the nursing assistant.

The brief historical introduction gives due credit to the Englishmen Tuke and Conolly and shows how attitudes regarding psychiatric illness have changed without, however, giving any explanation of current thought. The importance of teamwork and co-operation is stressed throughout the book and although the book deals specifically with the role of the aide within the team, she is not left in doubt about the aims of the team as a whole.

It is not entirely clear what precisely is the 'role' of the professional nurse in the opinion of the author. It would appear from the book that some of the work of the aide would be carried out by the trained nurse in this country.

The chapters dealing with attitudes, aide-patient

relationships, observation and reporting are simple and to the point and would require no modification whatever in this country. The author then deals with the protection of the patient from suicide and other risks, mentioning perhaps unnecessarily that firearms should not be carried on psychiatric wards. Although many examples of hazards and emergencies are given, the novice should not feel frightened after reading this section and should gain confidence as a result of the author's manner of approach.

A large section of this book is taken up with the care of the patients in relation to their symptoms. The point is rightly stressed that, in providing nursing care to psychiatric patients, it is not necessary to know the diagnosis of the patient. The nursing of patients who are over-active, under-active or withdrawn, of patients who have delusions, who are agitated and fearful, and of patients with a variety of physical complaints is described in language which is evidence of the author's sympathy with her patients and which inspires a positive and hopeful attitude in the reader.

The second half, dealing with special procedures and basic nursing procedures, would require some modification if this book were to be generally recommended for use in this country. The high price will probably prevent nursing assistants and junior student nurses from buying the book for themselves and if it is lent from the school library tutors should find it possible to point out where American and British practice differ. The inclusion of this book in the library is very strongly recommended.

THE NURSING STRUCTURE

Comments on 'Observations and Objectives' (Section II)

by H. A. GODDARD

WHEN the Nuffield Job Analysis Report on the Work of Nurses in Hospital Wards was first published, it was pointed out that it was " the end of the fact-finding stage, but the beginning of the policy-forming stage in which nurses, doctors and administrators must all play their part ".

In considering the Report the nursing profession had to make up its mind on two main points. First, was the picture of nursing presented by the Report fair and representative? Secondly, if it could be accepted as such, what changes were needed and how could they be brought about?

Naturally a great deal of thought had to be given to the first point, but after an initial resistance it can be claimed that although the statements made in the Report do not necessarily apply to all hospitals, by and large a fair and representative picture was given.

First Objective Achieved

The many conferences, working parties and study groups which were held not only in this country but in many others leave no doubt that the first objective—to stimulate thought—was achieved. Foremost among the groups who considered the Report was the working party appointed by the Royal College of Nursing, and their comments published in November 1953 form the basis of the constructive thinking which has led to the publication of the pamphlet *Observations and Objectives** which was the subject of a recent study conference.

The comments which I have to offer relate to the question of the nursing structure, and in particular the ways and means which can be applied to conserve nursing skill. When a hospital admits a patient and accepts the responsibility for his treatment, it enters into an implied contract to furnish adequate care. Included in this arrangement, and certainly one of its more important aspects, is the quantity and quality of nursing service rendered to that patient.

While adequacy of quantity does not necessarily guarantee adequacy of quality, it is axiomatic that good nursing care cannot be consistently maintained unless there is enough time in which to plan and give that care. To quote the statement on page 5 of the pamphlet, it is the ward sister's responsibility " to see that all the resources of her ward are so organized as to give maximum care to those under her charge, not only to ensure that their physical needs are met, but that their sense of confidence and security is built up as well." Now in the Nuffield Report I suggested that the ward sister was often bogged down by a welter of minor duties which would quite easily be performed by someone less highly skilled. This, at first, was not easy to put over, partly because of the feeling that existed in the minds of many ward sisters that any such lightening of her duties would in some mysterious way detract from her overall authority. Indeed this feeling was not confined to ward sisters, and one responsible body—the Standing Nursing Advisory Committee to the Department of Health for Scotland—says in its comments on the Nuffield Report " Nearly all the minor duties which she (the sister) performs form part of her total control and certainly her total interest in her ward. If those duties were removed and laid on some other non-nursing type of personnel, the ward sister might have more time for nursing and teaching, but she would not have a feeling of overall responsibility for a unit ".

This, I submit, is sheer nonsense. You might just as

*'*Observations and Objectives'—a statement on nursing policy published by the Royal College of Nursing, price 2s.*

well say that the manager of a bank could not feel overall responsibility for his bank unless he personally polished the brass plate outside and entered all the cheques drawn by his clients in the bank's ledger.

Obviously his wealth of experience can be much better employed, and in the same way the ward sister is of much greater service to her patients if she concerns herself more with the planning of activities of those who work with her than in doing simple jobs which are well within the compass of other people.

The same committee goes on to say in a later section of its report: " since nursing skill is so scarce it is important that great economy should be exercised in its use ", and I must say I find it most difficult to reconcile these two diametrically opposed viewpoints.

Happily there are signs all over the country that sisters are anxious to rid themselves of the shackles which have been placed on them by tradition and custom, and the enthusiastic participation in the ward sisters study groups which I have been conducting on behalf of the College gives me great hopes for the future.

If nursing skill is to be conserved some basic lines upon which to work must be suggested, and the College working party has set out in an admirable manner the four principal ways in which this can be done. They are:

1. The re-organization of ward personnel;
2. The improvement of equipment and layout;
3. The re-allocation of non-nursing tasks to others;
4. The review and modification of nursing tasks and procedures.

It is not intended to imply that all these things can be done in every hospital, but if conservation of nursing skill is accepted as necessary, they are the fields to be explored.

A brief review of each of them may be of help.

Re-organization of Ward Personnel

Since the satisfaction of the patient's needs must be considered the primary objective of nursing care, the point must be made that those needs may vary from day to day. Some of the criticisms which have been voiced from time to time are that the element of personal care is lacking; that the care is ill-timed and inadequate, for example, the night wash and bedmaking taking place in the afternoon, patients having no opportunity to wash their hands after toilet; and that the patient's day is too long. To remedy this state of affairs the College recommends the nursing team, and this is a welcome approach. I am convinced, too, that it is an approach which will give the greatest personal satisfaction to all who are concerned with the care of the patient. The concept of patient-centred care by a team composed of nursing and auxiliary staff is not new, but so many people are apt to dismiss it as impossible without giving serious thought to whether it can be instituted. Research, and by research I mean the consultation of the people who are actually engaged in this work (not a large-scale national inquiry), is needed to examine the implications of the various ways of introducing a more personal note into the care of the patient and thus enhancing satisfaction on all sides.

One aspect which I have reason to believe is causing some concern to nurses is the fear that nursing team plans, since they would of necessity need to use auxiliary workers, would result in what is called dilution and thus have a detrimental effect upon the status of the profession as a whole.

Frankly, I believe that this fear is quite unfounded. If the total work content of a ward (and this applies to every type of ward including mental hospitals) is studied it will be found that there is a volume of work of a type not requiring the skill and knowledge of a trained nurse which can be efficiently conducted by subordinate staff under trained supervision. All the recorded observations I have made fully bear this out, and the acceptance of the principle that the dividing line between ' trained ' and ' untrained ' is not a rigid one, that there are degrees of skill applicable to different grades of staff, would allow the ward sister to plan the activities of her ward to cater not only for the needs of the patient, but for the needs of the nurse in training.

This is not dilution of labour—it is a recognition of the fact that there are degrees of skill necessary to satisfy nursing needs, and so far from doing harm to the prestige of the trained nurse, it should do much to enhance it.

The concept of the nursing team demands leadership, organization, integrated action, in-service training and effective supervision. The details of the plan as developed in different hospitals or even in several units within the same hospital will vary according to the demands of the situation, the variations in physical facilities and the numbers and types of personnel available.

Surely the attitude of mind in considering possible nursing team plans should be " What sort of team plan can we institute with the resources at our command? " and not, as is so often the case " We cannot have a team plan because . . ."

Improving Equipment and Layout

The more extensive use of method study can be of great help in improving equipment and layout and the supervisor who is anxious to improve methods in her unit can do so if she is prepared to go to a little trouble. The main difficulty arises because people are accustomed to accept situations as they are, and it needs courage to suggest perhaps radical alterations in a ward or department which has been jogging along comfortably for years. Good supervision, however, must never accept that because a thing has always been done it is necessary to go on doing it or, if it is necessary, that the way in which it is being done is the best way. The following plan is suggested as being simple and effective. It involves

(*a*) an analysis of existing methods by recording in detail everything that is being done, and

(*b*) questioning each detail as to its necessity and the possibility of there being a better way of doing it.

The first step, that of *analysis*, is the keynote of the procedure and observation and accurate recording of what is being done is of prime importance. It is only by breaking down the activity into the greatest possible detail that opportunities for improvement and/or elimination can be seen. It is important while doing this to note any special phase at which the worker seems to be experiencing difficulty. Some of these difficulties may be due to the fact that the worker is not suited, or has not been properly trained for the activity in question, in which case appropriate action can be taken. In most cases, however, difficulties which do arise are inherent in the job, and it is the function of supervision to find them out and remove them. It should be particularly emphasized that in making this kind of study the supervisor should be careful *not* to time the work being done. There is a tendency always to talk of ' time and motion study ' as if the two were inseparable, but they are quite distinct and if the most is to be got out of the motion study for the improvement of methods, the time factor must be ignored. The observation method of analysis and detailed recording is the only reliable foundation for methods studies.

Having observed and recorded, the supervisor then embarks on stage 2, which is to challenge each detail.

This is the really interesting stage, and it will be found that by asking a number of fundamental questions the

sufficiency of the arrangements can be tested. Examples are—

Why does the activity take place? Is it absolutely necessary to the purpose of the unit ?

When does it take place ? This question will be of considerable help in arriving at data about time-tables, frequency of operations, cycles of activities and peak periods. How often ? is a good subsidiary question.

Where does it take place, or in the case of equipment, where is it ? The arrangement and accessibility of equipment is very important and can have quite an effect on the nursing of the patient. Much can be done in this way to see that the working area is so arranged and equipped that good nursing is possible, economy of operation and maintenance facilitated, and the time and energy of personnel conserved. Quite recently I was in a hospital where in one of the wards the hot-water bottles were kept at one end of the ward and the hot water supply was at the other. When a patient needed a hot-water bottle the nurse had to walk to the place where they were kept, walk the whole length of the ward to fill the bottle, go to yet another place for the cover, and back to the patient. This is probably an extreme example, but who knows what other examples could be found if only the trouble were taken to look for them.

Who does it ? What is the relationship between the activity and the person doing it ? Is the activity one which could be done just as effectively by someone less highly skilled ?

To sum up, one could say that this stage of the study brings out all the details necessary for the critical examination of stage 3. Here the ideas which have presented themselves during the two previous steps need to be reviewed and their possibilities examined. Three keywords are given as aids to planning the progress of new methods.

1. Eliminate—every unnecessary movement.
2. Simplify—check the sequence of motions.
3. Combine—movements wherever possible.

If as a result of the study it is felt that a new method or a variation of an existing one could be introduced, it is important that the supervisor should convince not only her own superiors but also the staff whom she is supervising that her suggested alterations are sound. It is good practice to work out ideas with the people who are actually doing the job, and it is therefore necessary to explain the purpose of the study at the outset and enlist the help of those who are taking part. The guiding principles to be adopted before any new method is introduced are—

1. Submit the new method for approval.
2. Convince and train those who are to use it.
3. Check the results.

The variations of methods studies are unbounded, but they all depend upon having accurate data upon which to work. One very simple experiment is to make a plan of the ward or department, showing the arrangement of furniture and equipment, and spend some time noting the journeys made by nurses and other personnel in the course of their duties. This will give an idea of the flow of work and will enable unnecessary journeys to be eliminated, thereby making the work less tiring to the individual.

Re-allocation of Non-nursing Tasks

The extent to which nursing skill can be conserved largely depends on the supervisor's ability to administer, to discriminate and to delegate. It is true that hospital authorities have in the past (and possibly in the present) expected the nursing staff to fill in the many gaps which may be caused by the fact that non-nursing personnel do not always work a seven-day week. The many domestic tasks which the nurse has been observed to do are mainly concentrated at the weekends when domestic labour is scarce. The nurse is expected as a matter of expediency to cope with these tasks, but it is not really fair on her and every effort should be made by the administrative authorities to meet this situation. I know the answer is always given that you cannot get domestic staff to work at weekends, but I wonder how much effort has really been put into trying to get appropriate staff or whether it is not largely a matter of taking the line of least resistance and leaving it to the nurses.

I do not propose to comment on the tasks delegated by medical or laboratory staff to nurses. This is a matter for the profession itself, but it is important to recognize that in many hospitals quite a considerable amount of nursing time is spent in this way.

The question of ward clerical assistance is one which has already been given much prominence and there is no doubt that much can be done to lighten the load of the ward sister by providing her with adequate clerical assistance.

Reviewing and Modifying Nursing Tasks

When I presented some of the early results of the Nuffield Job Analysis, I endeavoured to show the ward routines over a 24-hour day. The remark of one of the medical members of the steering committee on examining this paper was " these are not routines—they are rituals ". Methods studies will reveal how much time is spent in ' rituals ' and a critical eye should be brought to bear upon them. In a debate in the House of Lords on the Nuffield Job Analysis no less than three eminent doctors expressed their surprise that so much time is spent on four-hourly temperatures and similar regular procedures, and they expressed the opinion that many of these could be cut down and in the case of long-stay patients even omitted. It is true that the noble lords in question were no longer in practice, but the fact remains that the opinion was freely expressed that such rituals could be simplified with a corresponding saving in nurses' time.

Among further examples of what can be done to standardize, eliminate or re-allocate nursing tasks are the following:

1. *Review of form-filling and paper work.* It may come as a surprise that I have included this group of activities as a nursing task, and the impression has got abroad that I have said that ward sisters should not do these things. That is not the case. There has never been the slightest suggestion either in the Nuffield Report or in subsequent publications of mine that these are not essential tasks. What I have said is that the ward sister should from time to time review all forms of record and report to ascertain if their purpose is justified and whether there is any duplication of effort. This can be done by listing them under the following headings—

(1) title of record or report;
(2) originated by;
(3) sent to (including number of copies);
(4) purpose.

In almost every instance it will be found possible to eliminate some of them and specific studies which have been made show that a great deal of unnecessary work is being done in this sphere.

2. *Dirty linen.* In many hospitals much time is spent in sluicing foul linen and the question as to whether this is one of the proper tasks of a nurse is a very debatable point. The same applies to scrubbing lockers, bed macintoshes and bedsteads, and there is evidence that much time and disinfectant are used in these tasks.

I am not competent to express an opinion on this point, so I must quote the Royal College of Nursing which

WARD FESTIVITIES COMPETITION
Entry Form on page 1352
£50 IN PRIZES

in one of its publications says: "From the point of view of disinfection such routine procedures have been shown to be ineffective and should be discouraged, except for unpleasant cases when their use would be justified."

Finally it must be remembered that the ward or department does not operate in isolation, and however good the plan for its administration or the nursing of patients within it may be, the co-operation and support of other departments and other personnel is needed to make it effective.

The College comments quite bluntly on this point, and says "To some extent nurses are themselves to blame in that their traditional training may make them unwilling to put their point of view to the doctors."

This diffidence must be overcome, and every nurse in a responsible position must be able to put her point of view, to state her case with competence. That is a real part of the administrative function, and a clear appreciation of the elements of administration will materially assist her to do so. I was talking on these lines to a group of nurses at one of our big provincial hospitals earlier this year. During my visit I lunched in the medical staff room, and I was horrified to find myself introduced as "the man who is preaching subversive doctrines to our ward sisters". There is nothing at all subversive in making plans for the proper administration of a ward, and if, in the course of making those plans, representations to other people have to be made, it is perfectly right and proper so to do.

Medical Films for Teaching

NEW films on heart disease, endocrine glands, the brain and the nose, produced by Encyclopaedia Britannica Films and distributed by the G.B. Film Library, were shown recently. The first three are black and white; the one on the nose is in colour. They are all 16 mm. films and run for 11 minutes each.

The one on heart disease is the best of the four, showing with X-ray motion pictures and animated diagrams the systemic and coronary circulations and how disease develops. The endocrine glands film, in addition to pictures and diagrams, also shows pathological tests on mice and a goat, illustrating the changes in activity when the thyroid and parathyroid glands are removed.

The other two films are perhaps too elementary for student nurses and more suited to senior schoolgirls. The film about the brain has an amusing diagram of a 'central filing system' to show how nervous impulses are sorted out, and the film about the nose has a delightful diagram showing the movement of the cilia and mucus in the nostrils. For the most part however these two films rely on pictures of those models which surely every demonstration room possesses these days.

The black and white films cost £14 each, 10s. to hire; the colour film costs £25, or £1 to hire. Each has a teaching handbook with notes by A. J. Dalzell-Ward, the spoken commentary, and questions to ask after the film. The G.B. Film Library contains over 3,000 entertainment, educational and industrial films and has recently opened a special department to deal with hospital inquiries. Full details can be obtained from the G.B. Film Library, 1, Aintree Road, Perivale, Middlesex.

St. George-in-the-East Reopens for Hungarian Refugees

AMONG the numerous centres caring for refugees from Hungary, the recently-closed St. George-in-the-East Hospital, Wapping, has been taken over by the London County Council and is now re-opened to house some 500 men, women, children and babies. It had only been disused for three months, but dockside grime had accumulated, and 30 medical students from The Middlesex Hospital volunteered to scrub and sweep it from top to bottom, ready to receive the refugees. In charge of the nursing arrangements is Mrs. C. S. Brown, S.R.N., S.C.M., formerly matron of East Hamlet Hospital, Ludlow, and an assistant matron under the L.C.C. To assist her Mrs. Brown has a staff nurse, now appointed sister, and a rota of St. John and Red Cross nursing members.

The former casualty department has been turned into a sick bay of 12 beds—follicular tonsillitis is at the moment the most common illness needing nursing care, although about three out of every 10 of the Hungarians need medical attention for minor ailments. Regular medical sessions are held each morning, most of the duties being undertaken by two local general practitioners, assisted by a Hungarian woman doctor among the refugees.

Foot ailments are common, as many have walked from 70 to 100 miles to safety. Dental caries is widespread, even among quite small children, and it would appear that many conditions may stem from dietary deficiency. Most of the children have never drunk milk, though they are beginning to like it; oranges are also unknown, but they now clamour for them. Almost none of the refugees is accustomed to eat meat.

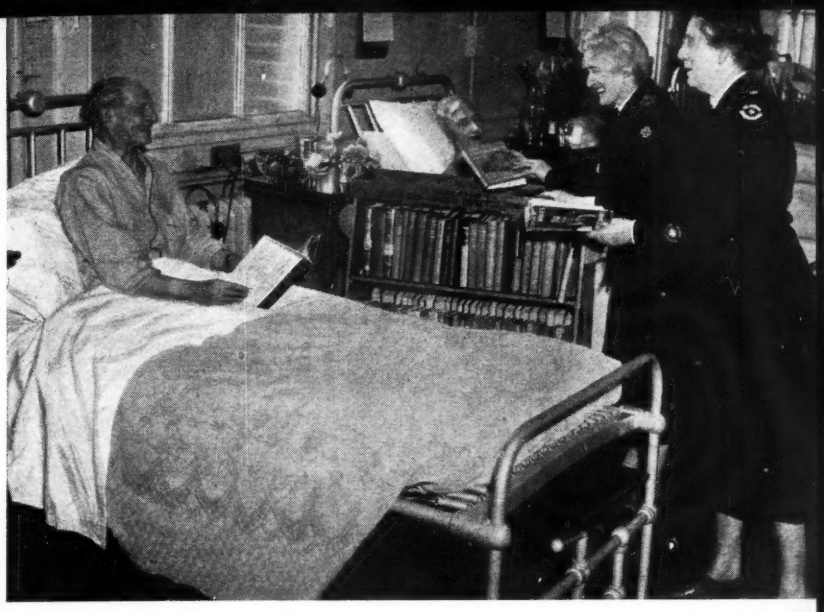
Interpreters are in great demand, and among those who have volunteered in this capacity is a Hungarian-speaking period costume designer for I.T.V. Interpreters must escort those needing dental treatment, visits to hospital for X-ray, etc., and interviews for jobs. There are several pregnant women who are already attending antenatal clinics.

There is the greatest variety among the refugees at the centre—from a qualified midwife to a ballerina; from the chef of a luxury hotel to a very highly qualified engineer, and there are several trained nurses. Matron is referring the midwife to the Central Midwives Board, and the nurses are learning English intensively so as to be able, they hope, to take their place in the nursing profession. The chef is in charge of the catering and cooking with several Hungarian assistants under him.

All hospitals and clinics in the area have been willingly co-operative. Queen Elizabeth's Hospital for Children have offered a few beds for any acutely ill child patients if needed, and the Hungarian doctor was shown over the hospital by the medical men so as to gain some insight into the running of a British hospital; she is learning English and hopes to qualify for a hospital post in due course.

Many different organizations and individuals are lending their help in the complex business of running the centre. One task was to mark 1,000 sheets, pillowcases and towels before the opening. Matron and her helpers rarely go off duty before midnight, but all are cheerful and enthusiastic and encouraged by the gratitude they receive. A bunch of beautiful white chrysanthemums adorned with a red, white and blue bow on matron's desk which is in the surgery is one proof of this.

Two qualified librarians in the men's medical ward of Paddington Hospital—a 'training school' for the library service.



St. John and Red Cross Library Service Brings Books to Patients in Hospital

The library trolley in the long-stay women's ward, and (right) the day-room of a men's ward; smiles and jokes greet the 'library ladies'.

BOOKS FOR THE SICK

THOSE of us who are present at the receiving end of the St. John and Red Cross library service—who watch the well-laden trolley with its temptingly arranged books and magazines wheeled into the ward to circulate among the patients' beds—can have little idea of the large-scale undertaking and complex organization which lies behind this service to 1,591 hospitals up and down the country. Over 5 million books a year are distributed by 3,600 St. John and Red Cross personnel, 93 per cent. of whom are voluntary workers.

The task of ensuring that this enormous number of books is kept in good repair and in a high standard of cleanliness is a big one and a special branch of the service—the book-binding and repairing centres—undertake this side of the work. A short training course is available, either at London headquarters or at the county repairing depots, to men and women who are able to give their services for regular periods, not necessarily full-time. It is a fascinating craft for those who are patient, accurate and 'good with their hands', and a neatly executed repair job undoubtedly has in it something of the satisfaction of creative work. The service provides the necessary specialized tools and equipment.

In the library work itself training courses of all types, from the elementary or basic to the category training course for experienced librarians (which carries a certificate and badge), are held regularly at headquarters in London. In certain counties where suitable facilities and training personnel are available these courses can be held locally. Examinations, written and practical, follow the more advanced courses. One course, held recently, is illustrated in these pages.

Appeals for books and organizing their collection is another branch of the work and one which has its own skills and problems: perhaps the most pressing of these is to convey successfully to the public that the books they want to get rid of are not the ones most welcome to the library service either. Though, in fact, even white elephants are sorted out and the best sold in lots to dealers,

A Course for Librarians of the St. John and Red Cross Library Service, at Paddington Hospital

A qualified hospital librarian gives a talk and practical demonstration on library trolley dressing to the students.

Matron takes tea with members of the course: it happens to be her birthday, so she cuts her birthday cake.

At the outset of each course, Miss G. B. Rainey, matron of Paddington Hospital, gives a talk on ward routine and the approach to the patient.

and the remainder disposed of as salvage.

Those responsible for receiving the books donated become quite expert at assessing their usefulness and appeal—and also possible rarity value. A very old printed pamphlet was found among a recent gift consignment. As it was of no possible reader interest, the officer concerned was about to condemn it to salvage when, on second thoughts, he contacted an auctioneer of books with whom the service had had frequent dealings. " We will give you £50 for this outright ", said this gentleman, arriving at headquarters hot-foot on receiving a telephoned description of the pamphlet; and so somebody's unconsidered trifle brought in £50 to swell the funds of the library service.

Incidentally, the financing of this large-scale project is quite a problem. Originally its service to all types of hospitals was free of charge—and is still free to all Service hospitals, both in this country and abroad, and to all ex-Service pensioner patients. But by 1950 it became evident that, with rising costs, the funds available from the joint committee of St. John and the Red Cross would be sufficient only to meet this primary commitment. It was therefore agreed with the Ministry of Health that in future civilian hospitals would contribute towards the cost of the service at an agreed rate based on their average annual occupied bed figure.

In the mental hospitals the charge is based on what are called ' reader bed ' figures, so as to exclude beds occupied by patients who would be unable to benefit from a library service. The present rate for ordinary hospitals is 10s. 6d. per occupied bed per annum—less than 2½d. per bed per week; in certain cases, including fever hospitals homebound tuberculosis patients, and also mental institutions, the rate is adjusted according to the type of service required.

Over 50,000 volumes are available in the London loan library from which a patient's own individual choice can be met on request. Special loan libraries in London and the counties serve tuberculosis patients whether in hospitals, clinics, or being cared for in their own homes. It is almost a point of honour with the St. John and Red Cross library service never to admit defeat, no matter how unusual the book asked for, until all possible sources have been tried. If a book is out of print and no second-hand copy can be found after exhaustive search, alternative titles which may meet the case are offered.

It is pointed out at headquarters that in the case of long-stay patients, such as those at tuberculosis sanatoria, a larger stock of books is needed, for the number which will adequately serve a quickly changing population in the acute hospital will need to be more frequently renewed if their titles and jackets are not to become all too familiar to the long-stay patient—with consequent loss of morale. Also, among such patients, there is a bigger demand for specialized books on a great variety of subjects. Such

hospitals, therefore, generally find the loan library system suits their needs best—that is, the patients make requests for a specific book which is then procured from the county library depot; if not forthcoming from there, a postcard from the librarian to headquarters will almost always produce it from the loan library kept exclusively for the supply of books to tuberculosis ward and sanatorium patients. All books for tuberculosis patients are kept separate from the rest and are repaired in a separate section. Special arrangements are made for fever hospitals where in most cases paper-bound volumes and up-to-date magazines are supplied. Any disinfecting which is necessary is done by the hospital authorities.

There are county branches of the St. John and Red Cross hospital library service in all counties of England, Wales and Northern Ireland and at each a hospital library county organizer is responsible for setting up local depots, book-repairing centres, the running of book drives and the enrolment of voluntary librarians to run the service to the hospitals. Three main qualities are needed—a love of books, an interest in the sick, and a pleasing, sympathetic personality—the first of which is no use without the other two. An academic knowledge of books and literature, admirable in itself, will not make the successful hospital librarian; she must be able to inspire friendly feelings, to sympathize with the needs of the patient, encourage and draw him out, and to stimulate his interest in reading.

The St. John and Red Cross library department, as is well known, maintains a special service of electrical reading-aid equipment for the disabled patient. There is the microfilm projector for patients in iron lungs or lying flat, and there are over 700 films in the microfilm library. There is an automatic page-turner for patients unable to use their hands; the switch can be operated by pressure of chin, between the knees, under the elbow or with the foot. Most ordinary books can be read with the help of these ingenious devices. These electrical reading aids are available on loan, or as part of the ordinary hospital library service.

A special department at London headquarters contains foreign language books and magazines—some, at least, of almost every language possessing a written literature, including Eskimo! The voluntary worker in charge here has various methods of determining which of the most obscure languages a newly arrived book belongs to. He often compares such books with copies of the Bible which is, of course printed in practically every language, sometimes using a magifying glass for detailed comparison of similarities in oriental or other unfamiliar printed characters.

The fine arts section of the hospital loan library is very well stocked and works in collaboration with the Red Cross picture service to hospitals; the latter often stimulates the desire to know more about art, and the same applies to art therapy in hospitals among tuberculous patients and other long-stay patients.

The great and growing service to the sick rendered by the St. John and Red Cross Hospital library service is undoubtedly an important aid to the successful treatment of innumerable patients; it is also a means of enlisting in a very practical way the goodwill and active participation of a large body of men and women who are not able to qualify, or suited to qualify, for other and better-known branches of Red Cross work. In this service their willingness to serve their fellow men can find effective scope and a satisfaction that is its own reward. E. E. P.

BERKSHIRE HOSPITALS EXHIBITION

(continued from page 1335)

convulsion therapy now carried out in the theatre under pentothal anaesthesia with the use of muscle relaxants such as Flaxedil or Scoline. Patients no longer dreaded the treatments, and they could be safely given to older patients without risk of fractures, as violent muscular contractions did not occur.

There was an excellent display of the work produced in the occupational therapy department, ranging from embroidery and tapestry to the most professional looking soft toys for children. An unusual exhibit here was a picture of a sunny village street with a country cottage carried out entirely with pieces of wood in varying shades from light cream to deep sepia, the effects of light and shade were very cleverly contrived and the whole effect very pleasing.

Further exhibits came from the tailoring, upholstery and shoe-mending departments where patients could work and learn trades if they wished.

A series of posters gave a good idea of the social life at Fair Mile. They had been painted by an Italian student nurse, Mr. Serg Bechia. One depicted programmes of dramatic entertainments by players among the patients and staffs at Fair Mile from 1877 to the present day, showing that the value of this aspect of the life of the hospital community was no new thing. Another showed how dancing was a feature of the entertainment from waltzing in the old days to rock'n'roll today. Another represented the many games available to the patients and staff, whist drives, billiards, draughts, television, dominoes and so on. Both design and execution of these and other similar posters were excellent. The medical superintendent Dr. Ogden, the matron, Miss A. Pilgrim, and the senior tutor, were presented to the Duchess as she toured the Fair Mile Section.

In similar manner the work of Borocourt Hospital for mental defectives was displayed, first by photographs of the exterior and interior, showing the patients and staff at work and at play. An old county house with a number of villas in its extensive grounds, it provides a home for large numbers of men, women and children, of whom those who are well enough are allowed out on parole and go out to suitable work in the neighbourhood.

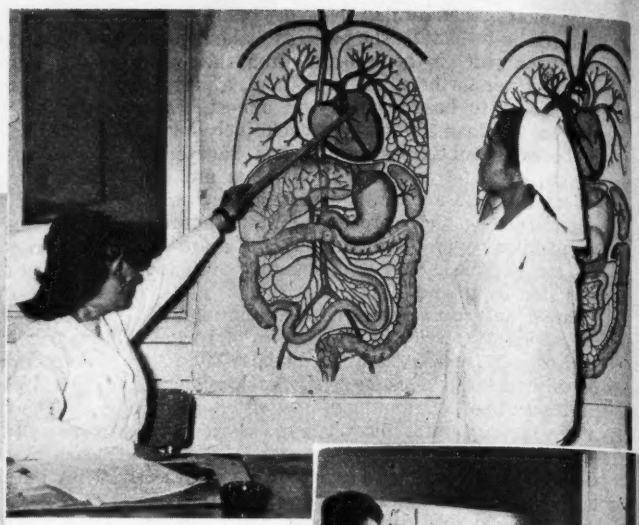
Finally there were stands showing the work of the League of Friends of Fair Mile and Borocourt Hospitals. The members adopt patients who have no friends and relatives, sending them birthday and Christmas cards and presents, and visiting them if possible, arranging for clubs outside the hospital precincts, for holidays possibly, firework displays on Guy Fawkes night and running shops for those who are not allowed outside the hospital grounds.

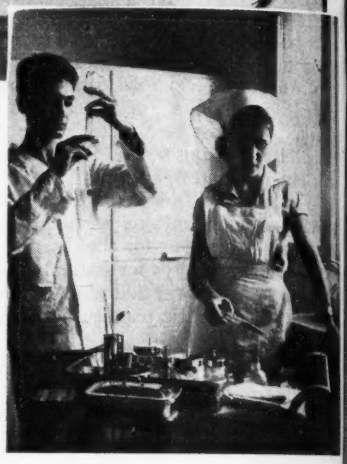
Another stand depicted the work of the National Association for Mental Health and an inquiry desk arranged by Miss A. A. Saville, regional nursing officer of the Ministry of Labour, and manned by her and her staff, at which young people interested in the prospects of mental nursing as a career could get information about it and about the local training schools.

Another interesting display in photographic and poster form came from the Ministry of Health, having been drawn up from mental hospitals all over the country by the Central Office of Information. In addition, films were shown daily and on Friday a brains trust was organized.

Visitors to the exhibition should certainly have left well informed about the work of the Berkshire mental hospitals and we hope further results will prove the value of so comprehensive an exhibition. K. F. A.

AT MALBEN HOSPITAL, BEER YAACOV, ISRAEL





Above: *an anatomy class at the Malben nurses school at Beer Yaacov.*

Right: *students in the laboratory.*

The keyword is integration

by SYLVIA GELLER,
Director, Nursing Department, Malben Hospital.

BEFORE indicating, so to speak, 'how we did it', a few words are in order to describe the meaning and significance of Malben. First, the letters stand for 'Institutions for the Care of Handicapped Immigrants'. The organization is supported by the American Joint Distribution Committee.

This philanthropic organization gives care and rehabilitation to about 8,000 people in close on 50 institutions, which include hospitals for tuberculosis and for other chronic diseases, homes for the aged and handicapped, as well as sheltered workshops; there is also a loan programme. Here we shall describe only one phase, that of nursing education, in one hospital.

Fortunately it costs nothing to dream. It is not only an inexpensive hobby, but it is as well a pleasurable and exciting experience. One stands to lose nothing, and one's dreams may actually come true.

Today the Malben Hospital at Beer Yaacov is the largest tuberculosis institution in the Middle East. It has most up-to-date equipment for the treatment of tuberculosis, including two modern operating theatres, a blood bank, extensive laboratories, etc. Each pavilion accommodates 45 patients in rooms of from four to six patients and has its fluoroscopic equipment, its own library and lounge where patients who are allowed up can listen to the radio or attempt lectures and Hebrew lessons. Those permitted out of doors can rest on verandahs or walk in the shaded gardens. During the final stage of treatment patients attend the occupational therapy centre to regain their working strength and learn new skills.

Need one point out the dearth of nursing personnel in Israel in 1951? Neither love nor money, so to speak, could procure a nurse. Our needs for nursing personnel were mounting daily. We were a new institution and our uprooted patients came not to the sound of quiet and order but rather to the din of hammers, wheels, stainless steel and so on.

The skeleton staff consisted of several trained nurses, recently arrived from various parts of the world, and 14 nurse aides. This was our staff for the opening of the hospital on July 17, 1951, when the patients began to arrive from various institutions where they had already become more or less adjusted.

During the endless hours of preparing, adjusting and organizing services capable of meeting patient needs, a phrase "if we only had more trained nurses, Malben graduates", kept repeating itself in my mind endlessly. This of course was wishful but purposeful speculation, for in reality we began to plan for a six-month nurse aide course.

Fifty five students applied, 38 were accepted, but only 28 arrived on September 10, 1951. Nineteen completed the course in March 1952, when the second class had already been in progress for three months.

During these months of observation of patient care and needs, and of staff and student behaviour, two facts emerged, the necessity for a better prepared staff—only in dreams I saw them as Malben graduate nurses—and the need for a programme which would lend itself not only to the acquisition of technical facts, but would as well help the student to attain a more integrated way of behaviour. But again, in reality we began the first practical nurse

course in November 1955. This was followed by another class, and before this course was completed, the in-service programme was started for the nurse aides.

As a result of these courses, we had 81 practical nurses (38 nurse aides and 43 practical nurses) by the end of 1954.

Yet the nursing atmosphere was destitute for a hospital of 520 beds. Distinctly, something deeper than technical competence was lacking. As a working unit, professional thinking, feeling and striving were missing. Upon further evaluation we felt that professional dignity, poise, feeling of sympathy and particularly patience—patience for the patient, with each other, with other departments—were superficial. Yet these qualities traditionally distinguished medical and nursing personnel from all other professions. Thus out of necessity the dream persisted and we strove to add residential facilities, we enriched our student programme, we continued in-service programmes for the staff, we tried various opportunities to enhance student learning experiences—individual care, role plays, case studies, etc. Our medical staff co-operated in ward conferences, and in the meantime the medical services increased.

It is said that opportunity comes to those who are prepared, thus on October 10, 1954, we opened our three-year nursing school—a dream come true!

However, after a year's experience we found that it was only half a dream come true. How could we influence adolescents of various backgrounds to feel and act as well-rounded personalities? How could they acquire the real nursing spirit—devotion, kindliness, sensitivity, responsibility? We sought a way to inspire our nurses with these qualities, not only for the good of our patients but also for their own benefit for personal adjustment and happiness.

Since 1951, we had tried to introduce teaching methods and combinations to bring about in the student what psychologists call 'integrated personality'.

Planning the Integrated Programme

Before our second course started we began in earnest to plan an integrated programme of studies. We reviewed available literature, we consulted with the medical and nursing staffs and finally prepared in more or less detail the programme. This involved the placing of various aspects of each subject as required by the Misrad Habriut (Health Department), so that they correlated. For example: the Digestive System—anatomy and physiology; Microbiology—the intestinal flora and parasites; Pharmacology—the anti-helminthic cathartics; Hygiene—the effect of proper nutrition, food habits, etc.; Nursing arts— the enemata, colonic irrigations lavage and gavage. It was like filling in with various colours and forms a pattern of hand-work, or better still like matching the pieces of a puzzle to create a complete picture.

Anatomy and physiology of course are the pivotal points about which the other subjects were placed for correlation. Chemistry was given intensively—six hours weekly—and physiology was started after the completion of the skeletal system.

Thus our purpose for integration included the aims of achieving:

1. Improved nursing care—mental, physical and emotional
   (*a*) correlation between sciences;
   (*b*) correlation between sciences and nursing arts.
   (*c*) connection and co-ordination of all types of nursing experiences to produce a complete unity of learning.
2. Improved relationships of staff to each other and to non-nursing departments.
3. Learning to recognize connections, and relationships in learning experiences as well as in daily non-professional activities and behaviour in order to attain an integrated personality which is the key to mental health and happiness.

At any rate it seems that teachers must strive to integrate as many subjects as possible, since this type of teaching conforms to the laws of learning which are based on Thorndyke's assumption that learning takes place through changes in the nervous system: "The learner must respond intellectually, emotionally and physically, and react to a whole learning situation, rather than to a single stimulus.

Reactions to New Method

Actually, our integration programme was very limited because there was an unenthusiastic approach to a new method, illness and absences of teachers, and other unforeseen conditions. Besides this, one cannot swallow this method hook, line and sinker. The following must also be considered.

1. Teachers teach at different tempos.
2. Students vary in intellectual and emotional levels; they may not recognize where to co-operate outside a nursing situation; they may not know how to carry over to personal adjustment.
3. Students vary in receptive abilities.
4. Students show various preferences, and hence lag where they feel no preferences.
5. Absences and other unforeseen conditions.

It seems to me however, that these can be correlated and overcome by diligent observation, attendance of all lectures, and prompt adjustments, so that lags are prevented and that all learning is synchronous.

There is no doubt that integration can be extended to the minutest experiences, which is for the time being my goal. Integration whether in patient care or personal experiences forms a bulwark against the strains and stresses encountered in our daily living. To assume that the whole dream came true would be ridiculous, but at any rate our continuous striving and revaluations of results may bring us closer to our goal. However, we must also be prepared to find that our goal, like the horizon, recedes and it is for us always to follow it.

SUPERANNUATION

THERE comes a time in every nurse's life when questions about superannuation arise. For the most part it is regarded by the young nurses as "yet another bit knocked off my salary", but when she gets married, leaves nursing, changes jobs or retires, superannuation achieves its real importance and leads to rather nervous visits to the finance office, filling up largely incomprehensible forms, wondering how much money will come back to her purse and if there will be any complications.

The explanatory booklet, *National Health Service Superannuation Scheme*, has been revised again this year and is now on sale at H.M. Stationery Office, price 1s. New entrants to the Health Service are given a copy free of charge by their employers. The booklet succeeds in simplifying this necessarily complicated subject in a series of short paragraphs explaining contributions, benefits, pensions, injury allowances, gratuities and arrangements on changing or leaving Health Service employment. Paragraph 40 is of special importance as it deals with application for approval of a course of study, so that the period of the course does not count towards a 'disqualifying break in service'. Paragraph 45 deals with 'approved employment' outside the Health Service, for example nursing in a public service in the Dominions. Nurses would do well to obtain a copy of this booklet and keep it at hand for reference.

Books for Your Leisure

PARIS ALBUM, by Jean Cocteau. (W. H. Allen, 16s.)

Portraits-Souvenirs, the French title of *Paris Album,* was published in 1935 as a series of articles in *Le Figaro,* and is translated into English now for the first time by Margaret Crosland. It covers the years 1900-1914 in Cocteau's recollections of the theatre, circus, and skating rink of his early childhood, followed by chapters on his schooldays and young manhood, and his closer contacts with the theatrical and literary figures of the time.

From the description on the dust cover one might gather that this was just another book of reminiscences, and so it is, but it evokes a whole epoch which ended with the beginning of the First World War. Cocteau himself says that it is impossible to write memoirs and that he wants to collect his souvenir-portraits by losing the thread—"that the thread of chronological order would vanish in the distorting mirror of memory but that it would only appear to be lost." In another part of the book he affirms "Indeed, the past is only the future grown old and the present is the past still young". We have been warned, and this warning has the effect of lowering our defences so that our mood becomes one of acceptance and enjoyment of the pictures evoked—of seeing those large figures of the age through the poet's eye; of seeing all the richness and decoration and eccentricity which seems so far away now in our less highly-coloured world.

≈

ABOUT THE BIBLE, by Frank W. Moyle. (Geoffrey Bles, 16s.)

In these days it cannot be assumed that young people grow up with first-hand knowledge of the Bible—we are living at a period in history considered by many theologians to be closely parallel to that of the early Christian church. There is room therefore for books such as this to induce a thoughtful approach to the scriptures without being too scholarly.

To those modern writers who are "unwilling to admit that there can be any kind of truth other than scientific truth" Mr. Moyle replies that man's knowledge of God, like all his other knowledge, has come to him slowly and gradually. Beginning with the picture of "a less than half-civilized tribe cowering in terror at the foot of Mount Sinai, which they believed to be the abode of the storm-god whose voice was thunder", it shows us in the end men and women who have reached that spiritual maturity described in the words of St. Paul as "the measure of the stature of the fullness of Christ."

There are illuminating chapters on the romance of Ruth, the patience of Job and the adventure of Jonah, lighting up these familiar stories with new meaning. Written in an easy—almost colloquial—style that does not offend because of its sincerity, this book is intended as a helpful interpretation of the Old and New Testament for ordinary men and women who are seeking the truth that shall make them free.

≈

THE BOOK OF GOOD HOUSEKEEPING, compiled by the Good Housekeeping Institute. (The National Magazine Company Ltd., London, 45s.)

This is indeed a complete guide to good housekeeping in its widest sense—that of making and running a home, whether in a tiny flat or a newly designed house. For the few who can make housekeeping a full-time job, there is a wealth of information and new ideas in every section; but for the many who combine it with other work it is equally useful for it sets out to help the efficient housewife—the one who does the best work in the shortest time. Home-making is treated as a rewarding craft for which knowledge, skill and method are essential.

Left: *from 'The Book of Good Housekeeping'.*

Left: *from 'The Fairy Doll'.*

The book is excellently illustrated throughout, with a thumb index for the numerous black and white plates; there are line drawings and plans, and a number of beautiful colour photographs giving endless ideas for the use of colour in large or small rooms, and glimpses of gardens for town or country.

The whole volume is practical, showing the right tools for the job and giving the easiest and quickest ways of achieving successfully every task—from papering the walls to laying a stair carpet, planning a children's party or keeping the house and equipment in good order.

The five sections include setting up house, budgeting for time as well as money, making a family home, keeping the house warm, business affairs, safety and first aid, and buying, building or converting a house.

There are chapters on beauty care and clothes, everyday cookery (with numerous recipes) meal planning and parties and an interesting section on indoor plants.

Obviously the book for those shortly to be married, but an excellent gift too for the older woman in sight of retirement and the opportunity of creating the home of her choice.

For Children

TEDDY TAIL ANNUAL (Daily Mail). (Northcliffe House, London, E.C.4, 6s. 6d.)

A gaily coloured and strongly bound annual for the young admirers of Teddy Tail and his pals. There is plenty of variety and a number of pictures awaiting colouring by the owner of a new paintbox.

≈

THE FAIRY DOLL, by Rumer Godden. (Macmillan, 9s. 6d.)

Little Elizabeth was four and very miserable. Her brothers and sister were thin, she was fat; their hair was curly, hers was straight; and she was very slow and clumsy. She could not even ride her bicycle. And she remained miserable—until one Christmas when the fairy doll (no one knew where she came from—she had been at the top of the Christmas tree every Christmas for as long as they could remember) fell from the top bough.

The cleverly simple narrative is full of Christmas and fairies, with delightful illustrations, making a book which would be highly acceptable to a little girl.

OFF DUTY

At the Theatre

Right: *a scene from 'The Merchant of Venice' at the Old Vic.*

THE MERCHANT OF VENICE (*Old Vic*)

Wonderful staging and the most effective use of lighting and drop scenes make this production of *The Merchant of Venice* a delight to watch. But the play seems to have become divided. The gay youths of Venice and their happy love affairs surround but somehow are not part of the central tragedy of Shylock and his lost daughter, ducats, and all that has been his life.

Robert Helpmann is a malevolent Jew expressing greed and revenge with every movement of his grasping fingers but stirring no fleeting touch of pity. Several of the players are particularly good; Antonio (David Dodimead), Bassanio (Richard Gale), Gratiano (John Humphry) and Launcelot Gobbo (Dudley Jones) are perhaps the best cast. But familiar and majestic words call for a certain timbre of voice to add to the recollected music of the language and this was not always found. However, a large international audience was obviously enthralled.

THE TOUCH OF FEAR, *by Dorothy and Campbell Christie* (*Aldwych*)

A clever and well-acted thriller—although one must wait until the final scene for the real excitement and suspense to develop. Yet characterization is so good and types so well contrasted that interest is held throughout and mounts steadily to the final and surprising denouement. The play offers a convincing study of a son whose whole personality and mental balance are being wrecked by a tyrannical father who insists on treating him as a delinquent boy instead of the mature married man of nearly 30 that he is. Nicholas Hannen is highly successful with the unsympathetic part of Sir Walter Stanham, the bullying father, and Bryan Forbes, as his son Michael, gives a most recognizable portrait of a neurotic caught up in circumstances threatening to produce complete mental breakdown.

Michael's wife, Sarah Stanham, is played by Jill Bennett with individuality and skill, and Colin Gordon gives a polished performance as the family doctor—an important part. Outstandingly good character acting is contributed by Victor Maddern as Fred Owen, gardener and general factotum to the young Stanhams, and his hysterical wife, Rose (Edna Petrie) also introduces some light relief.

Your Record Library

ARE you one of those music lovers who remain within the accepted symphonic circle, or do you, if only occasionally, seek new and exciting adventures? Many of us tend to confine our symphonic experience to the eternal round of Haydn, Mozart, Beethoven, Tchaikovsky and Brahms, with the occasional Mendelssohn or Schubert, and totally ignore the works of the less familiar composers. In the process we are missing much that is really worth while. Concert promoters are of necessity governed by the claims of the box office, and a venture into the less frequented musical paths will often result in financial disaster.

The answer to this problem surely lies in your record library; it is here we can meet and join issue with that which is new to us and so enrich our cultural life and make new friends. The other day I caught up with the music of Anton Bruckner (1824-96) an Austrian composer who, we are informed by a well known musical guide," wrote nine symphonies of a classical-romantic cast, some of them requiring a very large orchestra". Thus does this altogether excellent guide dismiss the symphonic works of this composer in one short sentence; little wonder that Bruckner is but a name to the majority of music lovers. The new edition of *The Growth of Music* (Oxford University Press) does devote a paragraph to the Bruckner symphonies, remarking that "about the magnificence of the actual material of Bruckner's symphonies there can be no doubt", while my edition of the Pelican book on *The Symphony* gives detailed mention of only two of this composer's nine symphonies.

It was with this smattering of information at my command that I listened to the recording of Bruckner's Fifth Symphony, a performance of exceptional brillance by the Vienna Philharmonic Orchestra conducted by Hans Knappertsbusch. Here indeed was a musical experience that would live in the memory for many a day. Some of Bruckner's detractors remark on the, to them, unnecessary length of his symphonies (the Fifth for example lasts for an hour); however, I enjoyed every moment of it and am determined to give it an early second hearing.

The work, which is in four movements, has moments of great tenderness and tremendous power—features which combine to make the listening an altogether refreshing and thoroughly satisfying experience. I commend this symphony to those of my readers who choose to wander a little off the beaten track. I would suggest you make your initial introduction to the music through the beautiful and moving adagio which forms the second movement before listening to the symphony in its entirety. The finale to this symphony must surely rank as one of the most magnificent and impressive pieces of music in the symphonic repertoire. *The Growth of Music* suggests in its pages that Bruckner's music evokes Wagnerian scenes on the grand scale so it is fitting that the two 12-inch L.P. records given over to the symphony are completed with Wagnerian excerpts from *Gotterdämerung*—'Dawn' and 'Siegfried's Rhine Journey', together with 'Siegfried's Funeral Music'.

Do you find Spanish music particularly exhilarating? I certainly do, especially when it is accompanied by the rhythmic sounds of the castenets. All of which leads me to mention of a recording by Antonio and his Spanish Dancers in which we are introduced to the music of Soler, Granados, Turina, Falla, Larregla and Sarasate. This is a record which will transport you right into the heart of sunny Spain.

May I commend to your attention the *Decca Book of Opera* recently published, price £2. The book, which is lavishly illustrated, has a foreword by Erich Kleiber and contains descriptions of 164 operatic works together with biographies of singers and conductors. No fewer than 36 of the world's most distinguished authorities on music and opera have contributed to this volume. A useful addition to your music library and handy book of reference.

Bing Crosby is always a welcome visitor and I was especially pleased to receive recently two widely different recordings: *Songs I wish I had Sung* embraces numbers like 'April Showers', 'My Blue Heaven', 'Paper Doll' and 'Memories are Made of This', songs made famous by artists of this and former years and now sung in the inimitable Bing style. My second record was from the sound-track of the M. G. M. picture *High Society*, a remake of the Broadway stage and film success *Philadelphia Story*.

GORDON DAVIS.

PEARS CYCLOPAEDIA (*65th edition*) (*Pears, 15s.*)

The wealth of information and knowledge packed into these 1,000-odd pages is astonishing, the price surprisingly low for contents which include an atlas, a gazetteer, biographies, a chronicle of events and sections on general and particular information. To these has now been added a new section on Family Affairs, which gives practical guidance on house buying, raising a mortgage, insuring life and property, etc., as well as providing a short directory of well-tried organizations of national repute which are ready to guide readers through personal problems which they feel to be intractable. It is an invaluable reference book, justifiably proud of its tradition and accuracy.

From Our Belfast Correspondent

NORTHERN Ireland used to have the worst record in the British Isles for deaths from tuberculosis; now it probably has the best. This dramatic announcement was made by Alderman A. Scott, vice-chairman of the Northern Ireland Tuberculosis Authority, when he spoke at the opening of an exhibition in Belfast of handicrafts done by patients in chest and orthopaedic hospitals.

Fifty-six years ago, said Alderman Scott, the death rate was 300 per 100,000 of the population; in 1941 it was 104 and in 1946 when the Authority was set up, it was 89. Today it was about 12. Not, he hastened to add, that he would put the full credit for this to the account of the Authority. Other factors had to be taken into consideration—better housing and nutrition, higher standards of public health services and education, new drugs. This all meant that the Authority now placed less emphasis on the death rate and was more concerned with the incidence of the disease and this, too, was falling considerably.

One satisfactory feature of this decline, said Alderman Scott, was that there was no longer a waiting list for admission to hospitals or sanatoria. A patient might express a preference for a certain hospital as being nearer his home and might have to wait a short time for a bed there, but the Authority was no longer engaged in a battle to secure more accommodation and was indeed releasing many beds for general hospital purposes.

The great fight now was in the realm of prevention and he appealed to the general public to take full advantage of the preventive services like BCG and mass radiography. The Authority now had three radiography units in service, one static and two mobile, and they were available to everyone; last year 102,000 people had been X-rayed.

Mr. D. Hall Christie, chairman of the Authority, presided at the opening of the exhibition, which was performed by Dame Dehra Parker, Minister of Health and Local Government. Dame Dehra acknowledged the achievement of the Authority in bringing about a substantial reduction in the incidence and death rate of tuberculosis, but gave a warning that tuberculosis was an insidious disease and that they could not afford to relax precautions.

Central Midwives Board

MIDWIFE TEACHERS DIPLOMA EXAMINATION—PART I

Candidates should answer all these questions

SECTION 1

Public Health and Social Services

1. State the subjects you would choose for a series of six mothercraft lectures, giving reasons for your choice.
2. What do you understand by perinatal mortality and how is it affected by social influences?
3. Describe briefly the duties of the Central Midwives Board.

SECTION 2

Anatomy/Physiology and Teaching Principles

4. Describe the anatomical changes and the role of the cervix in pregnancy and labour.
5. Discuss the relative merits of systematic lectures as compared with a tutorial system.
6. Give an outline of a lecture on post-maturity and its complications.

Midwifery and the Infant

Candidates should answer all the questions

1. Discuss the role of antenatal care in the prevention of premature delivery.
2. Is too much importance today attached to breast feeding? Discuss this.
3. Describe the differential diagnosis between accidental and unavoidable haemorrhage.
4. What are the dangers of multiparity?
5. What is a trial of labour? Give the management of such a case.
6. Give your views on the various methods of caring for the umbilical cord.

MIDWIVES FIRST EXAMINATION

Candidates should answer all the questions.

1. Describe briefly the functions of the placenta. What may be learnt from examination of the placenta and membranes after delivery?
2. What *signs* of pregnancy may be detected at the 24th week of pregnancy in a primigravida?
3. Discuss the methods by which the progress of labour can be assessed. What are the common causes of delay in the second stage?
4. Describe the nursing care of a patient who has a third degree tear of the perineum. What ill effects may result from this injury?
5. Discuss resuscitation of an infant born in a state of white asphyxia.
6. In 1900, the maternal mortality rate was over 4 per 1,000; today, it is less than 1 per 1,000. How has this improvement been made?

DOCTORS AND NURSES MEET

A SHERRY party was held at the Health Department, Civic Centre, Bolton, on November 28, given by the health visitors, home nurses and district midwives of the borough to the family doctors of Bolton and district. About 80 people attended this happy and informal occasion.

This is the fourth such party given, and it now appears to be an annual event—it has been given twice by the family doctors to the domiciliary nursing services and twice by the domiciliary nursing services to the family doctors. As a result of the valuable contacts made at these parties a much closer co-operation now exists between family doctors and the staff of the health department.

WARD FESTIVITIES

YOUR ward festivities may win a prize for the ward amenities fund in this *Nursing Times* annual competition. Prizes are offered for descriptions and/or illustrations of the most effective ward decoration schemes this Christmas. Entries may be from individuals or from the ward as a team. Photographs or sketches are an advantage but not essential. Any entries published in the *Nursing Times* will be paid for at the usual rates.

£50 TO BE WON FOR WARD AMENITIES FUNDS

Fill in this coupon and attach it to your entry

Entries should be sent to the Editor, *Nursing Times*, Macmillan and Company Ltd., St. Martin's Street, London, W.C.2, not later than JANUARY 5.

Nursing Times Christmas Competition

Royal College of Nursing

Public Health Section

QUARTERLY MEETING AND OPEN CONFERENCE

A quarterly meeting and open conference will be held at the Royal College of Nursing, London, W.1, on **Saturday, January 12,** at 10.30 a.m.

10.15 a.m. Registration and coffee.

10.30 a.m. Business meeting (Section members only).

OPEN CONFERENCE

2 p.m. *Epilepsy.*

Chairman: Dr. Desmond Pond, physician, University College Hospital and the Maudsley Hospital.

Speakers: Dr. Colin Edwards, physician, West End Hospital for Neurology and Neurosurgery; neurologist, West Kent Area, South-East Metropolitan Regional Hospital Board.

Miss M. E. Allnatt, matron, Chalfont Colony.

4 p.m. Tea.

Will those wishing to attend the conference please apply to the Secretary, Public Health Section, Royal College of Nursing, W.1, before January 5, enclosing 4s. 6d. for conference and tea or 2s. 6d. for conference only.

ROYAL COLLEGE OF NURSING
HEADQUARTERS, LONDON:
Henrietta Place, Cavendish Sq., W.1
EDINBURGH: 44, Heriot Row
BELFAST: 6, College Gardens

ROYAL COLLEGE OF NURSING APPEAL

for the Nation's Fund for Nurses

A new year will soon be here with new opportunities for service, new joys and new responsibilities. Please will you start a new responsibility in the form of a small monthly donation to help your colleagues whose opportunities for service grow less with each new year?

Contributions for week ending December 22

	£	s.	d.
Harrogate and District Hospital Student Nurses' Unit	5	0	0
Miss E. Jones	1	0	0
Miss H. Fitch	1	10	0
Bath and District Branch. For Christmas	3	0	0
Northampton Branch		12	6
Mrs. I. A. Dawson	1	0	0
Miss M. F. Annand	1	0	0
Stamford and Rutland Hospital Student Nurses' Unit	2	2	0

Total 14s. 6d.

We acknowledge with many thanks gifts from Northampton Branch, Miss H. Fitch, Miss E. Lewis and Miss K. M. Smith, Woolwich Memorial Hospital, Miss M. Smith, King's College Hospital, Brierley Hill Hospital per key member Miss M. C. Laird, Miss M. Laird, Moat Brae Nursing Home per key member Miss J. Anderson, Harrogate and District General Hospital Student Nurses' Unit, Royal East Sussex Hospital per key member Miss L. Orme, Invergordon County Hospital, per key member Miss C. Mackay, Miss Cowie, Baguley Hospital, Wythenshawe, per key member Miss G. E. Houghton, Preston Royal Infirmary per key member Miss B. Coysh, Students and staff of United Sheffield Hospitals School of Nursing, Mrs. Carpenter, Kettering and District Branch, M. W. Evesham, Miss Shurban, West Suffolk General Hospital per key member Miss R. Carey, Hitchin and District Branch, Sisters of North Herts Hospitals per key member Miss R. Logan, Metropolitan Hospital per key member Miss V. M. Barnes, Royal Hants Hospital per key member Miss E. A. Allen, Watford Branch, Wrexham and District Branch, Miss Butcher, Mrs. A. L. Dennis, Miss Furness, Miss N. Field, Miss J. E. Groom, Miss M. N. Hilton, Miss Keeting, Miss Randall, Miss G. Start, Miss M. R. Taylor, Miss E. Wase, Miss Withrington, Miss Yooll, Eastbank and Kirkwall Hospitals, Miss M. I. Otway and Miss M. K. Blyde, Miss M. C. Thyer, Miss M. Woodhead, E.G.H., Miss G. Broughton, Southend General Hospital per key member Miss Wood, Boston and District Branch, Herts. and Essex Hospital, Miss I. M. Brown, Miss Beard, Miss E. L. James and Miss Matlock, Sefton General Hospital Student Nurses' Unit, Rochford General Hospital, per key member Miss L. M. Taylor, Ancoats Hospital Student Nurses' Unit, St. Andrew's Hospital, Bow, Mrs. Woodman, and a great many anonymous donors.

E. F. INGLE,
Secretary, Royal College of Nursing Appeal for the Nation's Fund for Nurses, 1a, Henrietta Place, Cavendish Square, London, W.1.

COUNCIL ELECTIONS

NOMINATION papers for candidates for the annual election of 12 members to the College Council may be obtained from the College early in January, and must be returned by January 25. The following are the names of the retiring members who are eligible for re-election if nominated (the figures in brackets indicate the number of attendances at the ordinary and formal Council meetings).

RETIRING MEMBERS

Division (a): Nurses resident in England and Wales. Miss M. B. Powell (7, 0); Mrs. A. A. Woodman (10, 1); Miss M. Houghton (8, 0); Miss D. M. Smith (8, 2).

Division (b): Nurses resident in Wales. Miss S. C. Bovill (8, 2).

Division (c): Nurses resident in Northern Area of England. Miss R. C. Walker (8, 0).

Division (d): Nurses resident in Midland Area of England. Miss L. J. Ottley (8, 0).

Division (e): Nurses resident in Southern Area of England. Miss E. Opie (7, 1).

Scotland. Miss C. E. Anderson (6) out 10 Scottish Board meetings; Miss J. Armstrong (8).

Northern Ireland. Miss E. Mitchell (11 Northern Ireland Committee meetings); Miss M. McKee (8).

PROXY VOTING

Proxy forms are intended for College members in the following countries; Africa, except the Mediterranean seaboard; North and South America, except Canada, Newfoundland and the United States; Australia, China, India, Pakistan, Japan, New Zealand and the Straits Settlements. Other members abroad who have time to use the regular voting papers are requested to do so.

These members hold the power of appointing proxies to vote on their behalf. One of the following courses is open to them.

(1) To appoint a proxy to vote for such candidates as the proxy thinks fit.

This means that the proxy will exercise her judgement on behalf of the absent member and can vote for any of the candidates who are finally nominated.

(2) To limit the above proxy by appointing the proxy to vote in a particular manner.

For instance, the proxy would be instructed in the proxy form appointing her:

(*a*) to vote only for such of the retiring members of the Council as submit themselves for re-election, or

(*b*) to vote for certain of such retiring members of the Council and use her discretion with regard to the remainder of the vacancies, or

(*c*) only to vote for certain retiring members of the Council.

Other points of interest are:

(1) The instrument appointing a proxy, (i.e., the form authorizing the deputy to record a vote), is valid only for 12 months, and is, therefore, sufficient for the current election only. The date of the meeting, which is June 27, must therefore be carefully filled in by the member who makes out the proxy form.

(2) A vote given in accordance with the terms of the instrument of proxy shall be valid notwithstanding the death of the member signing the instrument, unless an intimation in writing of the death shall have been received at the office of the Secretary before the meeting.

(3) For proxy to be valid it must bear the stamp required by law, i.e., an English penny stamp, or coupon of equivalent value from the local post office.

By-law 10 under Article VIII, 20, of the College Charter requires those appointing a proxy to do so on a prescribed form which we reproduce below. A member abroad wishing to take part in the election should copy on a separate sheet of paper the wording below, filling in the blanks as required (if possible appending an English penny stamp), and post to the Secretary, Royal College of Nursing, Council Election, 1a, Henrietta Place, Cavendish Square, London, W.1, to be at the office at least 48 hours before the general meeting of members. At the same time she must notify the deputy mentioned in the proxy form that the authority for her to vote has been sent to headquarters, and ask her to attend at the College to receive her proxy form and to vote exactly in accordance with the instructions laid down by the absent member in the proxy paper.

Every instrument of proxy shall be, as nearly as circumstances will admit, in the form or to the effect following:

'..... (*give name in full*), being a member of The Royal College of Nursing..... (*give address as on roll, or, alternatively to the address, give number on the roll of membership of the College*) hereby appoint..... .....(*give name and address as roll, or, alternatively to address, give number of member on roll of membership of the College*), or failing her..... (*give name and address or number on roll*) as my proxy to vote for me and on my behalf at the election by ballot of members of the Council of the College to be held on the.....day of .....1957 and at any adjournment thereof (*and in particular to vote for the following persons if nominated).....

As witness my hand this.....day of.....1957.

Signature.....

* Cross out this clause if not required.

We hope College members in the above countries will avail themselves of this power to take part in the Council election by proxy.

Send the instrument or form to the Secretary and notify the proxy, who must, of course, be a member of the Royal College of Nursing.

Greetings from Miss L. E. Montgomery

DEAR MEMBERS,

I would like you all to know how much I am enjoying my holiday in Canada and in Texas, U.S.A. To begin with I certainly enjoyed a winter holiday while I was in Alberta because wintry weather came early this year and I experienced both snow and keen frost, but also blue skies and bright sunshine. In contrast, here in Texas, almost every day and all day I have revelled in warm bright sunshine and on two days the temperature has reached 83°.

I have found the changing scenery as I travelled west and then south to close to the Gulf of Mexico most interesting and the dress and customs of the people diverse and often amusing.

To all I send best wishes for Christmas and every happiness in the New Year.

LILIAS E. MONTGOMERY,
Northern Area Organizer.

Appointments

Rubery Hill Hospital, Birmingham

MR. A. S. HAMILTON, S.R.N., R.M.N., R.M.P.A., S.T.DIP. (London University), has been appointed PRINCIPAL TUTOR to Birmingham No. 6 Hospital Group (Mental B) School of Nursing, at Rubery Hill Hospital. Mr. Hamilton trained at Prestwich Hospital, Crumpsall Hospital and at King's College of Household and Social Science; he also holds the Diploma in Hygiene, Advanced Honours (R.I.P.H. & H.) Mr. Hamilton has held the posts of male tutor in sole charge, and of principal tutor at Prestwich Hospital, Lancashire, and has examined for the General Nursing Council since 1954. He will take up his new post as from December 31.

From the President of the International Council of Nurses

AS NEW YEAR APPROACHES, I am glad to send a greeting, through the pages of nursing journals, to as many nurses as these journals may reach in all countries with which the International Council of Nurses has contact.

Through membership in the ICN we are all members of a great international family, and can give evidence of our loyalty and support by promoting the ideals and activities for which the ICN holds itself responsible within the nursing profession.

May I send, through this journal, a message of sincere good wishes to all readers for their health and welfare in the year ahead; for satisfaction and progress in their work, and for the advancement of nursing in all countries.

MARIE M. BIHET,
President, International Council of Nurses.

NEW CHIEF, HEALTH DIVISION, UNRWA.—Dr. J. S. McKenzie Pollock, was recently appointed chief of the UNRWA Health Division and WHO representative to the United Nations Relief and Works Agency for Palestine.

The Society of Mental Nurses

THE Society of Mental Nurses held its 12th annual general meeting on November 3 at Holloway Sanatorium, Virginia Water, Surrey. At the business meeting there was complete agreement on the need to reduce expenditure and increase income, while maintaining the quality of the society's work and extending its scope, particularly the visits and the News Letter. The discussion was on the means of doing all these at once.

There were six vacancies on the Central Executive Committee, which were filled by re-electing two of the retiring members and bringing in four new ones. There were changes in the hon. officers, who are now:

chairman of the Central Executive Committee, Miss N. Reed, principal sister tutor, Oakwood Hospital, Maidstone;
vice-chairman of committee, Miss E. A Bell, matron, Fountain Hospital, Tooting Grove, London, S.W.17;
secretary, Miss U. V. Budge, principal sister tutor, Tooting Bec Hospital, London, S.W.17;
treasurer, Miss J. Burr, deputy matron, Bethlem Royal and Maudsley Hospital, Denmark Hill, London, S.E.5;
editor of News Letter, Miss A. Altschul, principal sister tutor, Bethlem Royal and Maudsley Hospital;
organizer of visits and lectures, Miss H. Buckett, deputy matron, Wonford House, Exeter.

Four members of the society had applied to go to the International Council of Nurses Congress in Rome next May. The delegates chosen for the three available places were Miss Reed, Miss Duncan (matron, Great Barr Park) and Miss Budge.

In the afternoon Miss Budge and Miss Townsend opened the discussion on the new syllabus of the General Nursing Council. The society welcomed the chance to experiment, and regretted that if the preliminary examination was to be discontinued there would be an intermediate examination which would still hamper the freedom of the experiment. Criticisms of detail were not called for at this stage; they were more concerned with the personnel who would carry out the training. Examiners set the standard in any training scheme, however much tutors might deplore it. They should be prepared for their duties before they took them up, and they should meet each other to confer during the course of their work.

Even more important than examiners were teachers. These include the trained nursing staff and medical officers in the wards where the nurses were trained, and the administrators. They would benefit from the special knowledge of the tutors, usually the only people in the mental hospital who had been taught how to teach, though they would not appreciate formal lectures. The teaching of the teachers should be the responsibility of a sub-committee of the education committee of the nurse training school.

Since training was designed to produce better mental nurses, it could be judged, not in examination rooms, but only in the wards where there were mental patients. The trained nurses who observed the effects of the new syllabus of training would include matrons, chief male nurses, tutors and ward staff. They would need to tell the General Nursing Council what they thought of it, so they must meet each other and discuss their experiences. Then the joint opinion of different grades of staff in different hospitals must be presented to the General Nursing Council. Machinery for this consultation and communication was offered by the Society of Mental Nurses.

The meeting ended with a sale which brought over £12 to the society's funds.

For a feverish chill—VEGANIN

For a sore throat—TYROSOLVEN

Veganin in Pyrexia

Two Veganin tablets three times a day relieve pain and lower temperature. Veganin promotes restful sleep and suppresses cough. Veganin, *precisely* blended for the greatest synergistic effect, is the safe antipyretic-analgesic-sedative.

Veganin is available in packs of 10, 20 & 50 tablets.

Tyrosolven exerts antibacterial effect

Tyrothricin, the safe antibiotic in Tyrosolven, attacks pathogenic bacteria in the mouth and throat. In addition, Tyrosolven also relieves pain and difficulty in swallowing. Allow one lozenge to dissolve under the tongue each hour until relief is obtained then one lozenge every three hours.

Tyrosolven is available in packs of 20 lozenges.

Salaries and conditions are in accordance with the appropriate National Scales.

CORNWALL

In this western County of hills and valleys can be found some of the most picturesque scenery and coastline with the minimum of travel, most routes providing a frequent bus or rail service.

Truro is the County's administrative centre and is the most central point. This Cathedral city is a busy shopping centre with opportunities for all forms of recreation, and there are good facilities at the other principal towns of Penzance, Redruth, Newquay and Falmouth.

The people of Cornwall take a great interest in their hospitals and through the very active Leagues of Hospital Friends have provided many amenities for both staff and patients.

WADHAM HOUSE

REGIONAL PRELIMINARY TRAINING SCHOOL FOR PUPIL ASSISTANT NURSES

LISKEARD, CORNWALL

SISTER TUTOR

I always use Dalmas— it gives complete protection

Put it on and forget about it for 24 hours! That's the beauty of a comfortable Dalmas waterproof dressing. They fit like a second skin (skin coloured, too) and they're the only dressings that will stay put on a fully-flexed knuckle. Dalmas waterproof dressings are completely occlusive too, can be kept on while washing and won't peel or fray.

DALMAS dressings are available in a variety of shapes and sizes in handy tins or cabinets and in strapping form.

The fruit that finishes the job you began

The dedicated nurse, the nurse with a vocation, knows no more humbling yet heart-lifting moment than when her patient passes the crisis of a serious illness; or when the will to live triumphs over the hazards of a major operation; or when she puts a new-born baby into its mother's arms.

It is then that a nurse knows the reward for all the hours of vigilance, the days and nights of exhausting routine and sheer hard work that go into her job.

When your patient is getting better

But a nurse's job doesn't end there. As the doctor's invaluable aide-de-camp, she must go on after the drama has passed, leading the patient gently back to health.

She knows that this is the time when vitamin C is *essential*, because it helps to build red blood cells and aids the quick healing of wounds, both internal and external. It fights the fatigue and lassitude that follows illness—and, even more important, it builds up the body's resistance and goes a long way towards preventing recurrence of ill-health.

Ribena every day—to keep fit

As the nurse knows, the body is unable to store vitamin C, as it does other vitamins; and so it becomes imperative that this vital component of health should be taken *every day*. This is why Ribena is the *nurse's* aide-de-camp. Ribena—made from blackcurrants, the fruit with the highest *natural* vitamin C content—is the most delicious tonic for convalescents, as well as for *maintaining* the health of your patients. It's not enough to nurse them back to fitness—make sure they *stay* fit by drinking Ribena every day.

It's not only a tonic—it's a treat!

Being entirely free from cellular material, Ribena does not upset the most delicate digestion—so even very small patients, from as early as the fourth week onwards, should have their vitamin C in the form of this delicious drink. During childhood generally, the vitamin C requirement of the growing organism is much higher, comparatively, than during adult life, so that the routine use of Ribena is obviously of great value. Children don't set up an automatic resistance to Ribena on the grounds that it's a medicine because "it's doing them good"—on the contrary, they love its fruit flavour, and think of it as a special treat. Children's nursing is made considerably easier with the help of Ribena.

You need it, too

Nurses too—because they are doing such an important job in the community, and one which necessarily makes immense demands upon their vitality—must remember that they themselves need daily vitamin C. Ribena is the answer—as essential a part of a nurse's equipment as her thermometer.

So remember to advise all your patients (the healthy ex-patients and the ones you are still tending) to keep a bottle of Ribena always in the house. Tell them to take it in milk, or in hot or cold water, to ensure that they have their all-important *daily* supply of vitamin C.

Ribena
